Solution - 06 :-

(i) The like decimal numbers have equal number of decimal places.

the like decimal numbers equivalent to

or. 17.5, 3.912 are 17.500, 3.912

Addition of zero(s) at the end of a decimal number does not change the value of the number.

- (i) the decimal like numbers equivalent to 5.04 , 13.1902
are 5.0400 and 13.1902 .
- (ii) the like decimal numbers equivalent to 2.451 , 3.7 ,
 28.34 are 2.451 , 3.700 , 28.340 .
- (iv) the like decimal numbers equivalent to $3.12\overline{678}$
and 27.0103 are 3.1000 , 2.6780 and 27.0103 .
- (\therefore Addition of zero(s) at the end of a decimal
number does not change the value of a number.)

Solution-07:-

(i) 0.3 , 0.4

0.3 and 0.4 are like decimal numbers.

We note that the whole number parts of given numbers
are equal.

Let us compare 10^{th} digits.

In 0.3 , digit at tenths place = 3 and
in 0.4 , digit at " = 4 .

Since $4 > 3$, therefore $0.4 > 0.3$.

(ii) First, we convert the given decimal numbers
to like decimal numbers which are equivalent.

the like decimal numbers equivalent to $1,099$ are
 1.00 and 0.99 .

We note that the whole number parts of given
numbers are not equal.

ones digit of 1.00 is 1
" of 0.99 is 0 .

Since $1 > 0$, therefore $1 > 0.99$
 $1.00 > 0.99$.

(iii) 1.09, 1.093.

The like decimal numbers equivalent to
1.09, 1.093 are 1.090 and 1.093.

We note that the whole number parts of given
numbers are equal.

Let us now compare their tenth digits

In both numbers, digit at tenths place = 0.

So, we compare hundredths digits.

So, we compare in both numbers, digits at
hundredths place = 9.

then we compare thousandths digits

In 1.090, digit at thousandths place = 0
1.093 , , , = 3

Since $3 > 0$, therefore $1.093 > 1.09$.

(iv) 0.50, 0.05.

The like decimal numbers equivalent to
0.5, 0.05 are 0.50 and 0.05

We note that whole number parts of given
numbers are equal.

Let us now compare their tenth digits

In 0.5, digit at tenths place = 5

0.05, " , , = 0

Since $5 > 0$, therefore $0.5 > 0.05$.

Solution-08:-

(i) Express the given numbers decimals as like decimals,
we get 45.78 and 345.80.

We compare Whole number parts

In 45.78 whole number is 45

345.80 " 345

since $345 > 45$, therefore $45.78 < 345.80$.

(ii) Express the given decimals as like decimals.
we get 37.701, and 37.710.

We note ^{the} that whole number parts of a given numbers
are equal.

Let us now compare their tenths digits

In both numbers, digits at tenths place = 7

so, we compare hundredths digits

In 37.701, hundredths digit is 0

37.710 " is 1

Since $0 < 1$, therefore $37.701 < 37.710$.

(iii) Express the given decimals as like decimals
5.907 and 5.903.

We note, the whole number parts of a given
numbers are equal

Let us now compare their tenths digits

In both numbers, digits at tenths place = 9.

Let us now compare their hundredths digits
in both numbers, digits at hundredths place = 0.

so, we compare thousandths digits.

In 5.907, thousandths digit is 7.

5.903 " is 3.

Since $3 < 7$, therefore $5.903 < 5.907$

Solution-09:-

- (i) 27.35, 27.305, 2.7, 2.543

Expressing the given decimal numbers as like decimal numbers, we get

27.350, 27.305, 2.700, 2.543

On comparing these like decimal numbers we find that

$$2.543 < 2.700 < 27.305 < 27.350$$

$$\text{Thus, } 2.543 < 2.7 < 27.305 < 27.35.$$

Hence the given decimal numbers in ascending order are 2.543, 2.7, 27.305 and 27.35.

- (ii) 4.53, 4.07, 29.1, 0.9, 0.709

Expressing the given decimal numbers as like decimal numbers, we get

4.530, 4.070, 29.100, 0.900, 0.709

On comparing these like decimal numbers we find that

$$29.100 > 4.530 > 4.070 > 0.900 > 0.709$$

$$\text{Thus } 0.709 < 0.9 < 4.07 < 4.53 < 29.1.$$

Hence, the given decimal numbers in ascending order are 0.709, 0.9, 4.07, 4.53 and 29.1.

Ex-10 Solution-10:-

- (i) 3.303, 33.03, 3.3, 30.33

Expressing the given decimal numbers as like decimal numbers, we get

3.303, 33.030, 3.300, 30.330

On comparing these like decimal numbers, we find that

$$3.300 < 3.303 < 30.330 < 33.030$$

Thus, $3.3 < 3.303 < 30.33 < 33.03$.

Hence, the given numbers in descending order
are $33.03, 30.33, 3.303, 3.3$.

(ii) $72.5, 2.75, 27.505, 0.275, 2.507$,

Expressing the given decimals as like decimals, we get
 $72.500, 2.750, 27.505, 0.275, 2.507$.

On comparing the given decimal numbers, we get

$72.500 > 27.505 > 2.750 > 2.507 > 0.275$

Thus, $72.5 > 27.505 > 2.75 > 2.507 > 0.275$

Hence, the given numbers in descending order are

$72.5, 27.505, 2.75, 2.507, 0.275$.

$$\begin{array}{r} 17.689 \\ 4) 70.756 \\ \underline{-4} \\ 30 \\ \underline{-28} \\ 27 \\ \underline{-24} \\ 35 \\ \underline{-32} \\ 36 \\ \underline{-36} \\ 0 \end{array}$$

[Place the decimal point in the quotient just completing the division of the whole number part of dividend.]

Hence, $70.756 \div 4 = 17.689$

(ii) $2.46 \div 6$

$$\begin{array}{r} 0.41 \\ 6) 24.6 \\ \underline{-24} \\ 6 \\ \underline{-6} \\ 0 \end{array}$$

[Place the decimal point in the quotient just completing the division of the whole number part of dividend.]

(iii) $3.016 \div 8$

$$\begin{array}{r} 0.377 \\ 8) 3.016 \\ \underline{-24} \\ 61 \\ \underline{-56} \\ 56 \\ \underline{-56} \\ 0 \end{array}$$

(iv) $8.64 \div 3.6$

To convert the divisor into natural number,
shift decimal point to right by one place.

$$8.64 \div 3.6 = \frac{8.64}{36}$$

$$= \frac{864}{36}$$

$$36 \overline{)86.4} \quad \text{Here}$$

$$\begin{array}{r} 2.4 \\ -72 \\ \hline 144 \\ -144 \\ \hline 0 \end{array}$$

(iv) $72.8 \div 0.04$.

To convert the divisor into natural number, shift decimal point to right by two places.

$$\frac{72.8}{0.04} = \frac{72.8 \times 100}{4}$$

$$= \frac{7280}{4}$$

$$4 \overline{)7280}$$

$$\begin{array}{r} 1820 \\ -4 \\ \hline 32 \\ -32 \\ \hline 08 \\ -8 \\ \hline 00 \end{array}$$

Hence $72.8 \div 0.04 = 1820$.

(vi) $0.144 \div 0.2$.

To convert the divisor into natural number, Shift decimal point to right by one place

$$\frac{0.144}{0.2} = \frac{0.144 \times 10}{2}$$

$$= \frac{1.44}{2}$$

2) $1.44(0.72)$

$$\begin{array}{r} 14 \\ -04 \\ \hline 04 \\ -0 \\ \hline 0 \end{array}$$

$\therefore 1.44 \times 2 = 0.72$
 $1.44 \div 2 = 0.72$.
