

Measures of Central Tendency

EXERCISE - 23.1

Q1. (a) Calculate the arithmetic mean of 5.7, 6.6, 7.2, 9.3, 6.2

(b) The weight (in kg) of 8 new born babies are 3, 3.2, 3.4, 3.5, 4, 3.6, 4.1, 3.2. find the mean weight of the babies.

Sol. (a) Sum of 5 observations = $5.7 + 6.6 + 7.2 + 9.3 + 6.2 = 35.0$

$$\text{Mean} = \frac{35.0}{5} = 7$$

(b) Sum of 8 weight = $3 + 3.2 + 3.4 + 3.5 + 4 + 3.6 + 4.1 + 3.2 = 28$

$$\text{Mean} = \frac{28}{8} = 3.5 \text{ kg.}$$

Q2. The marks obtained by 15 students in a class test are 12, 14, 07, 09, 23, 11, 08, 13, 11, 19, 16, 24, 17, 03, 20. find

(i) The mean of their marks.

(ii) The mean of their marks when the marks of each student increased by 4.

(iii) The mean of their marks when 2 marks are deducted from the marks of each student.

(iv) The mean of their marks when the marks of each student are doubled.

Sol.

$$\begin{aligned}\text{Sum of marks of 15 students} &= 12 + 14 + 7 + 9 + 23 + 11 + 8 + \\&13 + 11 + 19 + 16 + 24 + 17 + 3 + 20 \\&= 207\end{aligned}$$

$$(i) \text{ Mean} = \frac{207}{15} = 13.8$$

(ii) By increasing 4 marks in each student then increase marks $= 15 \times 4 = 60$

$$\text{New sum} = 207 + 60 = 267$$

$$\text{New mean} = \frac{267}{15} = 17.8$$

(iii) By deducting 2 marks from each student, then total deduction $= 15 \times 2 = 30$

$$\text{New sum} = 207 - 30 = 177$$

$$\text{New mean} = \frac{177}{15} = 11.8$$

(iv) The marks being doubled of each student then the new sum $= 207 \times 2 = 414$.

$$\text{New mean} = \frac{414}{15} = 27.6$$

Q3. (a) The mean of the numbers 6, 8, 7, x , 14 is 8.
Express y in terms of x .

(b) The mean of 9 variates is 11. If eight of them are 7, 12, 9, 14, 21, 3, 8 and 15, find the 9th variate.

Sol.

$$(a) \text{Sum of number} = 6 + y + 7 + x + 14 = 27 + x + y \quad (i)$$

But mean of 5 numbers $= 8$

$$\text{Sum} = 8 \times 5 = 40 \quad (ii)$$

from (i) & (ii)

$$27 + x + y = 40$$

$$\Rightarrow x + y = 13 \Rightarrow y = 13 - x$$

(b) Mean of 9 variates = 11

$$\text{Total sum} = 11 \times 9 = 99$$

But sum of 8 of these variates = $7+12+9+14+21+3+8+15 = 89$

$$\therefore 9^{\text{th}} \text{ variate} = 99 - 89 = 10$$

Q4. (a) The mean age of 33 students of a class is 13 years. If one girl leaves the class, the mean becomes $12\frac{15}{16}$ years. What is the age of the girl?

(b) In a class test, the mean of marks scored by a class of 40 students was calculated as 18.2. Later on, it was detected that the marks of one student was wrongly copied as 21 instead of 29. Find the correct mean.

Sol. (a) Mean age of 33 students = 13 years.

$$\text{Total age} = 13 \times 33 = 429 \text{ years.}$$

After leaving one girl, the mean of 32 students
= $12\frac{15}{16} = \frac{207}{16}$ years.

$$\text{Total age of 32 students} = \frac{207}{16} \times 32 = 414 \text{ years.}$$

$$\text{Hence the age of girl} = 429 - 414 = 15.$$

(b) Mean of marks = $\frac{\text{Incorrect marks of 40 students}}{40}$

$$\Rightarrow 18.2 = \frac{x}{40} \Rightarrow x = 728.$$

As marks of one student was wrongly copied as 21 instead of 29. = $728 - 21 + 29 = 736$.

$$\therefore \text{Correct mean} = \frac{736}{40} = 18.4$$

- Q5. Find the mean of 25 given numbers when the mean of 10 of them is 13 and the mean of the remaining numbers is 18.

Sol.

$$\text{Mean of 10 numbers} = 13$$

$$\therefore \text{Sum} = 13 \times 10 = 130$$

and mean of remaining 15 numbers = 18

$$\text{Sum} = 18 \times 15 = 270$$

$$\text{Total sum of 25 numbers} = 130 + 270 = 400$$

$$\text{Mean of 25 numbers} = \frac{400}{25} = 16$$

- Q6. Find the mean of the following distribution :

| Number | 5 | 10 | 15 | 20 | 25 | 30 | 35 |
|-----------|---|----|----|----|----|----|----|
| Frequency | 1 | 2 | 5 | 6 | 3 | 2 | 1 |

Sol.

| x | f | fx |
|-------|----|-----|
| 5 | 1 | 5 |
| 10 | 2 | 20 |
| 15 | 5 | 75 |
| 20 | 6 | 120 |
| 25 | 3 | 75 |
| 30 | 2 | 60 |
| 35 | 1 | 35 |
| Total | 20 | 390 |

$$\text{Mean} = \frac{\sum fx}{\sum f} = \frac{390}{20} = \frac{39}{2} = 19.5$$

Q7. The contents of 100 matchboxes were checked to determine the no. of matches they contained.

| | | | | | | | |
|----------------|----|----|----|----|----|----|----|
| No. of matches | 35 | 36 | 37 | 38 | 39 | 40 | 41 |
| No. of boxes | 6 | 10 | 18 | 25 | 21 | 12 | 8 |

- (i) Calculate, correct to one decimal place, the mean no. of matches per box.
 (ii) Determine how many extra matches would have to be added to the total contents of the 100 boxes to bring the mean upto exactly 39 matches.

Sol.

| No. of matches (x) | No. of boxes (f) | fx |
|-----------------------|---------------------|------|
| 35 | 6 | 210 |
| 36 | 10 | 360 |
| 37 | 18 | 666 |
| 38 | 25 | 950 |
| 39 | 21 | 819 |
| 40 | 12 | 480 |
| 41 | 8 | 328 |
| Total | 100 | 3813 |

$$\begin{aligned}
 \text{(i) Mean} &= \frac{\sum fx}{\sum f} = \frac{3813}{100} = 38.13 = 38.1 \\
 \text{(ii) New mean} &= 39, \text{ Total Sum} = 39 \times 100 = 3900 \\
 \therefore \text{New matches to be added} &= 3900 - 3813 = 87.
 \end{aligned}$$

Q8. Calculate the mean for the following distribution:

| | | | | | | | |
|-----------------------|----|----|----|----|-----|-----|-----|
| Pocket money (in Rs.) | 60 | 70 | 80 | 90 | 100 | 110 | 120 |
| No. of students | 2 | 6 | 13 | 22 | 24 | 10 | 3 |

Sol.

| Pocket money (in Rs.) (x) | No. of students (f) | fx |
|------------------------------|---------------------------|------|
| 60 | 2 | 120 |
| 70 | 6 | 420 |
| 80 | 13 | 1040 |
| 90 | 22 | 1980 |
| 100 | 24 | 2400 |
| 110 | 10 | 1100 |
| 120 | 3 | 360 |
| Total | 80 | 7420 |

$$\text{Mean} = \frac{\sum fx}{\sum f} = \frac{7420}{80} = 92.75$$

Q9. Six coins were tossed 1000 times, and at each toss the no. of heads were counted the results were recorded as under:

| | | | | | | | |
|---------------|----|----|-----|-----|-----|-----|----|
| No. of heads | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| No. of tosses | 20 | 25 | 160 | 283 | 338 | 140 | 34 |

calculate the mean for this distribution.

Sol.

| No. of heads (x) | No. of tosses (f) | fx |
|---------------------|----------------------|------|
| 6 | 20 | 120 |
| 5 | 25 | 125 |
| 4 | 160 | 640 |
| 3 | 283 | 849 |
| 2 | 338 | 676 |
| 1 | 140 | 140 |
| 0 | 34 | 0 |
| Total | 1000 | 2550 |

$$\text{Mean} = \frac{\sum fx}{\sum f} = \frac{2550}{1000} = 2.55$$

Q10 find the mean for this distribution:

| | | | | | | | |
|----------------------|----|----|----|----|----|----|----|
| Numbers | 60 | 61 | 62 | 63 | 64 | 65 | 66 |
| Cumulative frequency | 8 | 18 | 33 | 40 | 49 | 55 | 60 |

Sol.

| Numbers (x) | Cumulative frequency c.f. | frequency f | f.x |
|----------------|---------------------------------|----------------|------|
| 60 | 8 | 8 | 480 |
| 61 | 18 | 10 | 610 |
| 62 | 33 | 15 | 930 |
| 63 | 40 | 7 | 441 |
| 64 | 49 | 9 | 576 |
| 65 | 55 | 6 | 390 |
| 66 | 60 | 5 | 330 |
| Total | | 60 | 3757 |

$$\text{Mean} = \frac{\sum f_x}{\sum f} = \frac{3757}{60} = 62.616 = 62.62$$

Q11.

| Category | A | B | C | D | E | F | G |
|---------------------|----|----|----|----|----|-----|-----|
| Wages in Rs per day | 50 | 60 | 70 | 80 | 90 | 100 | 110 |
| No. of workers | 2 | 4 | 8 | 12 | 10 | 6 | 8 |

- (i) Calculate the mean wage. correct to the nearest rupee.
- (ii) If the no. of workers in each category is doubled, what would be the new mean wage?

Sol.

| Category | Wages (in Rs.) X | No. of workers f | f.X |
|----------|---------------------|------------------------|------|
| A | 50 | 2 | 100 |
| B | 60 | 4 | 240 |
| C | 70 | 8 | 560 |
| D | 80 | 12 | 960 |
| E | 90 | 10 | 900 |
| F | 100 | 6 | 600 |
| G | 110 | 8 | 880 |
| Total | | 50 | 4240 |

$$(i) \text{ Mean} = \frac{\sum f_i x_i}{\sum f} = \frac{4240}{50} = 84.80 = 85$$

(ii) If the workers are doubled, then

$$\text{Total no. of workers} = 50 \times 2 = 100$$

Total wage also be doubled

$$\therefore \text{Total wages} = 4240 \times 2 = 8480$$

$$\therefore \text{New mean} = \frac{8480}{100} = 84.80 = 85$$

- Q12. The marks obtained by a set of students in an examination are given below:

| | | | | | | |
|-----------------|---|----|----|----|----|----|
| Marks | 5 | 10 | 15 | 20 | 25 | 30 |
| No. of students | 6 | 4 | 6 | 12 | x | 4 |

Given that the mean marks of the set is 18, calculate the numerical value of x .

Sol.

| Marks (x) | No. of students (f) | fx |
|--------------|------------------------|-----------|
| 5 | 6 | 30 |
| 10 | 4 | 40 |
| 15 | 6 | 90 |
| 20 | 12 | 240 |
| 25 | x | $25x$ |
| 30 | 4 | 120 |
| Total | $32+x$ | $520+25x$ |

$$\text{Mean} = \frac{\sum fx}{\sum f} = \frac{520+25x}{32+x}$$

But mean = 18 (given)

$$\therefore \frac{520+25x}{32+x} = \frac{18}{1}$$

$$\Rightarrow 520+25x = 576+18x$$

$$\Rightarrow 25x-18x = 576-520$$

$$\Rightarrow 7x = 56$$

$$\Rightarrow x = \frac{56}{7}$$

$$\Rightarrow x = 8$$

Q13. If the mean of the following distribution is 7.5,
find the missing frequency f :

| | | | | | | | | |
|-----------|----|----|-----|----|---|----|----|----|
| Variate | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| Frequency | 20 | 17 | f | 10 | 8 | 6 | 7 | 6 |

Sol.

| Variate (x) | Frequency (f) | $f \cdot x$ |
|----------------|------------------|-------------|
| 5 | 20 | 100 |
| 6 | 17 | 102 |
| 7 | f | $7f$ |
| 8 | 10 | 80 |
| 9 | 8 | 72 |
| 10 | 6 | 60 |
| 11 | 7 | 77 |
| 12 | 6 | 72 |
| Total | $74+f$ | $563+7f$ |

$$\text{Mean} = \frac{\sum f x}{\sum f} = \frac{563 + 7f}{74 + f}$$

$$\Rightarrow \frac{563 + 7f}{74 + f} = \frac{75}{10} = \frac{15}{2}$$

$$\Rightarrow 2(563 + 7f) = 15(74 + f)$$

$$\Rightarrow 1126 + 14f = 1110 + 15f$$

$$\Rightarrow f = 1126 - 1110$$

$$\Rightarrow f = 16.$$

Q14. Find the value of the missing variate for the following distribution whose mean is 10:

| | | | | | | | |
|---------------------|---|---|---|----|---|----|----|
| Variate (x_i) | 5 | 7 | 9 | 11 | - | 15 | 20 |
| Frequency (f_i) | 4 | 4 | 4 | 7 | 3 | 2 | 1 |

Sol. Let missing variate be x , then.

| Variate (x) | Frequency (f) | fx |
|--------------------|----------------------|----------|
| 5 | 4 | 20 |
| 7 | 4 | 28 |
| 9 | 4 | 36 |
| 11 | 7 | 77 |
| x | 3 | $3x$ |
| 15 | 2 | 30 |
| 20 | 1 | 20 |
| Total | 25 | $211+3x$ |

$$\text{Mean} = \frac{\sum fx}{\sum f} = \frac{211+3x}{25}$$

But Mean = 10 (given)

$$\therefore \frac{211+3x}{25} = 10 \Rightarrow 211+3x = 250$$

$$\Rightarrow 3x = 39 \Rightarrow x = 13$$

\therefore Missing variate = 13.

Q15. In an examination taken by 50 candidates, the marks obtained are given in the table below. Calculate the mean marks.

| Marks | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 |
|-------------------|------|-------|-------|-------|-------|
| No. of candidates | 8 | 14 | 13 | 10 | 5 |

Sol.

| Marks | Class Mark x | No. of candidates x | fx |
|-------|-----------------|------------------------|------|
| 0-10 | 5 | 8 | 40 |
| 10-20 | 15 | 14 | 210 |
| 20-30 | 25 | 13 | 325 |
| 30-40 | 35 | 10 | 350 |
| 40-50 | 45 | 5 | 225 |
| Total | | 50 | 1150 |

$$\text{Mean} = \frac{\sum fx}{\sum f} = \frac{1150}{50} = 23.$$

Q16. Find the mean of the following distribution:

| Class - intervals | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 |
|-------------------|------|-------|-------|-------|-------|
| Frequency | 10 | 6 | 8 | 12 | 5 |

Sol.

| Class | Frequency (f) | Class Mark \bar{x} | $f \cdot x$ |
|-------|------------------|-------------------------|-------------|
| 0-10 | 10 | 5 | 50 |
| 10-20 | 6 | 15 | 90 |
| 20-30 | 8 | 25 | 200 |
| 30-40 | 12 | 35 | 420 |
| 40-50 | 5 | 45 | 225 |
| Total | 41 | | 985 |

$$\text{Mean} = \frac{\sum f x}{\sum f} = \frac{985}{41} = 24.024.$$

Q17. The frequency distribution of marks obtained by 40 students of a class is as under. Calculate the arithmetic mean.

| Marks | 0-8 | 8-16 | 16-24 | 24-32 | 32-40 | 40-48 |
|----------|-----|------|-------|-------|-------|-------|
| students | 5 | 3 | 10 | 16 | 4 | 2 |

Sol.

| Marks | No. of students f | Class Mark x | |
|-------|----------------------|-----------------|-----|
| | | | fx |
| 0-8 | 5 | 4 | 20 |
| 8-16 | 3 | 12 | 36 |
| 16-24 | 10 | 20 | 200 |
| 24-32 | 16 | 28 | 448 |
| 32-40 | 4 | 36 | 144 |
| 40-48 | 2 | 44 | 88 |
| Total | 40 | | 936 |

$$\text{Arithmetic Mean} = \frac{\sum fx}{\sum f} = \frac{936}{40} = 23.4$$

Q18. Find the mean of the following frequency distribution :

| Class-intervals | 0-50 | 50-100 | 100-150 | 150-200 | 200-250 | 250-300 |
|-----------------|------|--------|---------|---------|---------|---------|
| Frequency | 4 | 8 | 16 | 13 | 6 | 3 |

Sol.

| Class -interval | Frequency | Class Mark | fx |
|-----------------|-----------|------------|------|
| 0-50 | 4 | 25 | 100 |
| 50-100 | 8 | 75 | 600 |
| 100 - 150 | 16 | 125 | 2000 |
| 150-200 | 13 | 175 | 2275 |
| 200- 250 | 6 | 225 | 1350 |
| 250-300 | 3 | 275 | 825 |
| Total | 50 | | 7150 |

$$\text{Arithmetic mean} = \frac{\sum f_i x_i}{\sum f_i} = \frac{7150}{50} = 143$$

Q19. weights of 50 eggs were recorded as given below:

| Weight (in gms) | 80-84 | 85-89 | 90-94 | 95-99 | 100-104 | 105-109 | 110-114 |
|-----------------|-------|-------|-------|-------|---------|---------|---------|
| No. of eggs | 5 | 10 | 12 | 12 | 8 | 2 | 1 |

Calculate their mean weight to the nearest gram.

Sol: Let assumed Mean(A) = 97.

| Weight (in gms) | No. of eggs (f) | Class Mark (x) | $u_i = \frac{x - A}{h}$ | $f u_i$ |
|-----------------|--------------------|-------------------|-------------------------|---------|
| 80-84 | 5 | 82 | -3 | -15 |
| 85-89 | 10 | 87 | -2 | -20 |
| 90-94 | 12 | 92 | -1 | -12 |
| 95-99 | 12 | 97 | 0 | 0 |
| 100-104 | 8 | 102 | 1 | 8 |
| 105-109 | 2 | 107 | 2 | 4 |
| 110-114 | 1 | 112 | 3 | 3 |
| Total | 50 | | | -52 |

$$\text{Mean} = A + h \times \frac{\sum f u_i}{\sum f} = 97 + 5 \times \frac{-32}{50} = 97 - 3.2 \\ = 93.8 = 94 \text{ grams.}$$

Q20. The following table gives the daily wages of 50 workers of a factory:

| Wages (in Rs) | 25-30 | 30-35 | 35-40 | 40-45 | 45-50 | 50-55 | 55-60 |
|----------------|-------|-------|-------|-------|-------|-------|-------|
| No. of workers | 2 | 1 | 5 | 9 | 21 | 10 | 2 |

calculate the mean daily wage of a worker of the factory. If the daily wages of all the workers are increased by Rs. 8, what will be the new mean daily wage of a worker?

| Wages (in Rs.) | No. of workers (f) | Class Mark (x) | $u = \frac{x-A}{h}$ | fu |
|----------------|-----------------------|-------------------|---------------------|----|
| 25-30 | 2 | 27.5 | -3 | -6 |
| 30-35 | 1 | 32.5 | -2 | -2 |
| 35-40 | 5 | 37.5 | -1 | -5 |
| 40-45 | 9 | 42.5 | 0 | 0 |
| 45-50 | 21 | 47.5 | 1 | 21 |
| 50-55 | 10 | 52.5 | 2 | 20 |
| 55-60 | 2 | 57.5 | 3 | 6 |
| Total | 50 | | | 34 |

Let assumed mean (A) = 42.5 and $h = 5$

$$\text{(i) Mean} = A + h \times \frac{\sum f_u}{\sum f} = 42.5 + 5 \times \frac{34}{50}$$
$$= 42.5 + 3.4 = 45.9$$

\therefore Mean = Rs. 45.90

(ii) If Rs. 8 are increased to each worker, then
the increased part = $50 \times 8 = 400$

Total wages = Rs. $45.9 \times 50 + \text{Rs. } 400 = \text{Rs. } 2695$

$$\therefore \text{New mean} = \frac{2695}{50} = \text{Rs. } 53.90$$

Q21. The mean of the following distribution is 23.4.
Find the value of P :

| Class-intervals | 0-8 | 8-16 | 16-24 | 24-32 | 32-40 | 40-48 |
|-----------------|-----|------|-------|-------|-------|-------|
| Frequency | 5 | 3 | 10 | p | 4 | 2 |

Sd.

| Class Interval | Class Mark x | Frequency | |
|----------------|-------------------|-----------|-------------|
| | | (f) | $f \cdot x$ |
| 0 - 8 | 4 | 5 | 20 |
| 8 - 16 | 12 | 3 | 36 |
| 16 - 24 | 20 | 10 | 200 |
| 24 - 32 | 28 | P | $28P$ |
| 32 - 40 | 36 | 4 | 144 |
| 40 - 48 | 44 | 2 | 88 |
| | | $24 + P$ | $488 + 28P$ |

$$\text{Mean} = a + h \times \frac{\sum fx}{\sum f} = 23.4$$

$$\Rightarrow \frac{488 + 28P}{24 + P} = \frac{234}{10}$$

$$\Rightarrow (488 + 28P) 10 = 234 (24 + P)$$

$$\Rightarrow 4880 + 280P = 5616 + 234P$$

$$\Rightarrow 46P = 736$$

$$\Rightarrow P = 16.$$

Q22. The following distribution shows the daily pocket allowance of a children of a locality. The mean pocket allowance is Rs. 18. Find the value of f :

| Daily pocket allowance (in Rs) | 11-13 | 13-15 | 15-17 | 17-19 | 19-21 | 21-23 | 23-25 |
|--------------------------------|-------|-------|-------|-------|-------|-------|-------|
| No. of children | 3 | 6 | 9 | 13 | f | 5 | 4 |

Sol.

| Class Interval | Class Mark (x) | Frequency (f) | $f \cdot x$ |
|----------------|--------------------|-------------------|-------------|
| 11 - 13 | 12 | 3 | 36 |
| 13 - 15 | 14 | 6 | 84 |
| 15 - 17 | 16 | 9 | 144 |
| 17 - 19 | 18 | 13 | 234 |
| 19 - 21 | 20 | f | 20f |
| 21 - 23 | 22 | 5 | 110 |
| 23 - 24 | 24 | 4 | 96 |
| | | $40 + f$ | $704 + 20f$ |

$$\text{Mean} = \frac{\sum fx}{\sum f} = \frac{704 + 20f}{40 + f} = 18$$

$$\Rightarrow 704 + 20f = 18(40 + f)$$

$$\rightarrow 704 + 20f = 720 + 18f$$

$$\Rightarrow 2f = 16$$

$$\Rightarrow f = 8$$

Q23. The mean of the following distribution is 50 and the sum of all the frequencies is 120. Find the values of p and q:

| Class intervals | 0-20 | 20-40 | 40-60 | 60-80 | 80-100 |
|-----------------|------|-------|-------|-------|--------|
| Frequency | 17 | p | 32 | q | 19 |

Sd.

| Class Interval | Class Mark x | Frequency (f) | f.x |
|----------------|-----------------|------------------|-------------------|
| 0 - 20 | 10 | 17 | 170 |
| 20 - 40 | 30 | p | 30 p |
| 40 - 60 | 50 | 32 | 1600 |
| 60 - 80 | 70 | q | 70q |
| 80 - 100 | 90 | 19 | 1710 |
| | | 68 + p + q | 3480 + 30 p + 70q |

Sum of all frequencies is 120

$$\Rightarrow 68 + p + q = 120 \Rightarrow p + q = 52 \quad \text{--- (i)}$$

$$\text{Mean} = \frac{\sum f_i x_i}{\sum f} = \frac{3480 + 30p + 70q}{68 + p + q} = 50$$

$$\Rightarrow 3480 + 30p + 70q = 50(68 + p + q)$$

$$\Rightarrow 3480 + 30p + 70q = 3400 + 50p + 50q$$

$$\Rightarrow 3480 - 3400 = 50p - 30p + 50q - 70q$$

$$\Rightarrow 20p - 20q = 80$$

$$\Rightarrow p - q = 4 \quad \text{--- (ii)}$$

$$\text{Adding (i) & (ii)} - 2p = 56 \Rightarrow p = 28$$

$$\text{put } p = 28 \text{ in equation (ii)} - 28 - q = 4 \Rightarrow q = 24$$

- Q24. The mean of the following distribution is 57.6 and the sum of all the frequencies is 50. find the value of p and q:

| Classes | 0-20 | 20-40 | 40-60 | 60-80 | 80-100 | 100-120 |
|-----------|------|-------|-------|-------|--------|---------|
| Frequency | 7 | p | 12 | q | 8 | 5 |

| Class Interval | Class Mark x | Frequency (f) | f. x |
|----------------|-----------------|------------------|--------------------|
| 0 - 20 | 10 | 7 | 70 |
| 20 - 40 | 30 | p | 30 p |
| 40 - 60 | 50 | 12 | 600 |
| 60 - 80 | 70 | q | 70 q |
| 80 - 100 | 90 | 8 | 720 |
| 100 - 120 | 110 | 5 | 550 |
| | | 32 + p + q | 1940 + 30 p + 70 q |

Sum of all frequencies is 50

$$\Rightarrow 32 + p + q = 50 \Rightarrow p + q = 18$$

Now proceed as above question.

- Q25. The following table gives the lifetime in days of 100 electricity tubes of a certain make

| Life time in days | No. of tubes |
|-------------------|--------------|
| Less than 50 | 8 |
| Less than 100 | 23 |
| Less than 150 | 55 |
| Less than 200 | 81 |
| less than 250 | 93 |
| Less than 300 | 100 |

Find the mean life time of electricity tubes.

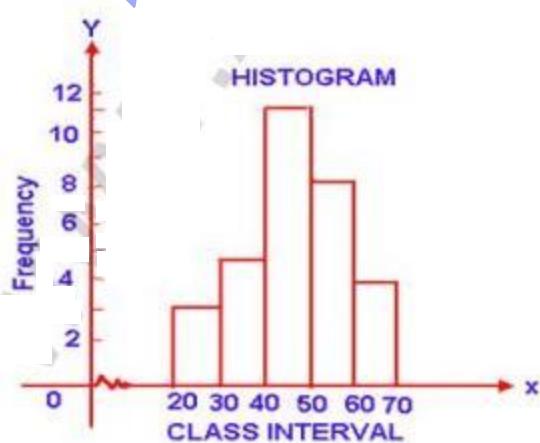

| Life time (in days) (Class intervals) | e.f. | Frequency (f) | Class Mark (x) | $u = \frac{x-a}{h}$ | fu |
|--|------|------------------|-------------------|---------------------|-----|
| 0-50 | 8 | 8 | 25 | -3 | -24 |
| 50-100 | 23 | 15 | 75 | -2 | -30 |
| 100-150 | 55 | 32 | 125 | -1 | -52 |
| 150-200 | 81 | 26 | 175 | 0 | 0 |
| 200-250 | 93 | 12 | 225 | 1 | 12 |
| 250-300 | 100 | 7 | 275 | 2 | 14 |
| Total | | 100 | | | -60 |

let assumed mean (A) = 175 and $h = 50$

$$\text{Mean} = A + h \times \frac{\sum f u}{\sum f} = 175 + 50 \times \frac{-60}{100}$$

$$= 175 - 30 = 145 \text{ days.}$$

- Q26. Using the information given in the adjoining histogram, calculate the mean correct to one decimal place.

Sol. From the histogram given we represent the information in the following table:

| Class -interval | Frequency (f) | Class Mark (x) | (fx) |
|-----------------|------------------|-------------------|------|
| 20-30 | 3 | 25 | 75 |
| 30-40 | 5 | 35 | 175 |
| 40 - 50 | 12 | 45 | 540 |
| 50-60 | 9 | 55 | 495 |
| 60- 70 | 4 | 65 | 260 |
| Total | 33 | | 1545 |

$$\text{Mean} = \frac{\sum f x}{\sum f} = \frac{1545}{33} = 46.81 \approx 46.8$$

EXERCISE - 23.2

- Q1. A student scored the following marks in 11 questions of a question paper: 3, 4, 7, 2, 5, 6, 1, 8, 2, 5, 7
Find the median marks.

Sol. Arranging in the ascending order 1, 2, 2, 3, 4, 5, 5, 6, 7, 7, 8

Here $n = 11$ i.e., odd

$$\text{The middle term} = \frac{n+1}{2} = \frac{11+1}{2} = \frac{12}{2} = 6^{\text{th}} \text{ term.}$$

$$\text{Median} = 5.$$

- Q2. (a) Find the median of the following set of numbers:
9, 0, 8, 5, 3, 5, 41, 5, 8, 7.

- (b) For the following set of numbers, find the median:
10, 75, 3, 81, 17, 27, 4, 48, 12, 47, 9 and 15.

- Sol. (a) Arranging in ascending order: 0, 1, 2, 2, 3, 4, 5, 5, 7, 8, 9
Here $n = 12$ which is even

$$\begin{aligned}\text{Median} &= \frac{1}{2} \left[\frac{n}{2}^{\text{th}} \text{ term} + \left(\frac{n}{2} + 1 \right)^{\text{th}} \text{ term} \right] \\ &= \frac{1}{2} \left[\frac{12}{2}^{\text{th}} + \left(\frac{12}{2} + 1 \right)^{\text{th}} \right] \\ &= \frac{1}{2} [6^{\text{th}} + 7^{\text{th}}] \\ &= \frac{1}{2} [4 + 5] \\ &= 4.5\end{aligned}$$

- (b) Arranging the given numbers in ascending order
3, 4, 9, 10, 12, 15, 17, 27, 47, 48, 75, 81

Here $n = 12$ which is even

$$\text{Median} = \text{Mean of } \frac{1}{2} \left[\frac{n}{2}^{\text{th}} \text{ term} + \left(\frac{n}{2} + 1 \right)^{\text{th}} \text{ term} \right]$$

= Mean of 6th and 7th terms

$$= \frac{15+17}{2}$$

$$= 16.$$

- Q3. If 3, 8, 10, x , 14, 16, 18, 20 are in ascending order and their median is 13, calculate the numerical value of x .

Sol. 3, 8, 10, x , 14, 16, 18, 20 are in ascending order and their median = 13

Here $n=8$ which is even

$$\text{Median} = \frac{1}{2} \left[\frac{n}{2}^{\text{th}} \text{ term} + \left(\frac{n}{2} + 1 \right)^{\text{th}} \text{ term} \right]$$

$$= \frac{1}{2} \left[\frac{8}{2}^{\text{th}} + \left(\frac{8}{2} + 1 \right)^{\text{th}} \text{ terms} \right]$$

$$= \frac{1}{2} [4^{\text{th}} \text{ term} + 5^{\text{th}} \text{ term}]$$

$$= \frac{1}{2} (x+14)$$

$$\therefore \frac{x+14}{2} = 13 \Rightarrow x+14 = 26 \Rightarrow x = 12$$

- Q4. Calculate the mean and the median of the numbers: 2, 1, 0, 3, 1, 2, 3, 4, 3, 5.

Sol. writing in ascending order is 0, 1, 1, 2, 2, 3, 3, 3, 4, 5

Here $n=10$ which is even

$$\text{Mean} = \frac{1}{n} (\sum x_i) = \frac{1}{10} (0+1+1+2+2+3+3+3+4+5) \\ = \frac{1}{10} (24) = 2.4$$

$$\text{Median} = \frac{1}{2} \left[\frac{10}{2}^{\text{th}} \text{ term} + \left(\frac{10}{2} + 1 \right)^{\text{th}} \text{ term} \right]$$

$$= \frac{1}{2} (5^{\text{th}} + 6^{\text{th}} \text{ terms})$$

$$= \frac{1}{2} (2+3) = 2.5$$

Q5. Calculate the mean and the median of the numbers:
 $1, 9, 10, 8, 2, 4, 4, 3, 9, 1, 5, 6, 2, 4$

Sol. writing in ascending order

$$1, 1, 2, 2, 3, 4, 4, 4, 5, 6, 8, 9, 9, 10$$

Here $n=14$ which is even

$$\text{(i) Mean} = \frac{\sum x_i}{n} = \frac{1}{14} (1+1+2+2+3+4+4+4+5+6+8+9+9+10) \\ = \frac{1}{14} (68) = \frac{34}{7} = 4.86$$

$$\text{(ii) Median} = \frac{1}{2} \left[\frac{n}{2}^{\text{th}} \text{ term} + \left(\frac{n}{2} + 1 \right)^{\text{th}} \text{ term} \right] \\ = \frac{1}{2} \left[\frac{14}{2}^{\text{th}} \text{ term} + \left(\frac{14}{2} + 1 \right)^{\text{th}} \text{ term} \right] \\ = \frac{1}{2} [7^{\text{th}} \text{ term} + 8^{\text{th}} \text{ term}] \\ = \frac{1}{2} (4+4) = 4$$

Q6. The mean of the numbers $1, 7, 5, 3, 4, 4$ is m . The numbers $3, 2, 4, 2, 3, 3, P$ have mean $m-1$ and median q . find (i) P (ii) q (iii) The mean of P and q .

Sol. (i) Mean of $1, 7, 5, 3, 4, 4$ is m . Here $n=6$

$$m = \frac{1+7+5+3+4+4}{6} = \frac{24}{6} = 4$$

Mean of $3, 2, 4, 2, 3, 3, P$ is $m-1$

$$m-1 = \frac{3+2+4+2+3+3+P}{7} \Rightarrow 4-1 = \frac{17+P}{7}$$

$$\Rightarrow \frac{17+P}{7} = 3 \Rightarrow P = 4$$

(ii) Now median of $3, 2, 4, 2, 3, 3, 4$

writing them in ascending order $2, 2, 3, 3, 3, 4, 4$

Here $n=7$ which is odd

$$\text{Median} = \frac{n+1}{2}^{\text{th}} \text{ term} = \frac{7+1}{2} = 4^{\text{th}} \text{ term} = 3$$

$$\therefore \gamma = 3$$

$$(\text{iii}) \text{ Mean of } p \text{ and } \gamma = \frac{1}{2}(4+3) = 3.5$$

Q7. Find the median for the following distribution:

| | | | | | | |
|---------------------------|----|----|----|----|----|----|
| Wages per day (in rupees) | 38 | 45 | 48 | 55 | 62 | 65 |
| No. of workers | 14 | 8 | 7 | 10 | 6 | 2 |

Sol. writing the distribution in cumulative frequency table:

| Wages per day (in Rs.) | No. of workers (f) | c.f. |
|---------------------------|-----------------------|------|
| 38 | 14 | 14 |
| 45 | 8 | 22 |
| 48 | 7 | 29 |
| 55 | 10 | 39 |
| 62 | 6 | 45 |
| 65 | 2 | 47 |

Here $n = 47$ which is odd

$$\text{Median} = \frac{n+1}{2}^{\text{th}} \text{ term} = \frac{47+1}{2} = 24^{\text{th}} \text{ term} = 48$$

(. Here all the observations from 23 to 29 are equal to 48)

$$\therefore \text{Median} = \text{Rs. } 48$$

Q8. Find the median for the following distribution :

| | | | | | | |
|-----------------|----|----|----|----|----|----|
| Marks | 35 | 45 | 50 | 64 | 70 | 72 |
| No. of students | 3 | 5 | 8 | 10 | 5 | 5 |

Sol: writing the distribution in cumulative frequency table :

| Marks | No. of students (f) | c.f. |
|-------|---------------------|------|
| 35 | 3 | 3 |
| 45 | 5 | 8 |
| 50 | 8 | 16 |
| 64 | 10 | 26 |
| 70 | 5 | 31 |
| 72 | 5 | 36 |

Here $n = 36$ which is even

$$\begin{aligned}
 \text{Median} &= \frac{1}{2} \left[\frac{36}{2}^{\text{th}} \text{ term} + \left(\frac{36}{2} + 1 \right)^{\text{th}} \text{ term} \right] \\
 &= \frac{1}{2} \left[18^{\text{th}} \text{ term} + 19^{\text{th}} \text{ term} \right] \\
 &= \frac{1}{2} (64 + 64) \\
 &= 64
 \end{aligned}$$

$$\text{Median} = 64$$

Q9. Marks obtained by 70 students are given below:

| | | | | | | | |
|-----------------|----|----|----|----|----|----|----|
| Marks | 20 | 70 | 50 | 60 | 75 | 90 | 40 |
| No. of students | 8 | 12 | 18 | 6 | 9 | 5 | 12 |

calculate the median marks.

(Hint: Arrange the variates in ascending order)

Sol. Arranging the variates in ascending order and in C.f. table.

| Marks | No. of students (f) | c.f. |
|-------|---------------------|------|
| 20 | 8 | 8 |
| 40 | 12 | 20 |
| 50 | 18 | 38 |
| 60 | 6 | 44 |
| 70 | 12 | 56 |
| 75 | 9 | 65 |
| 90 | 5 | 70 |

Here $n=70$ which is even

$$\text{Median} = \frac{1}{2} \left[\frac{70}{2}^{\text{th}} \text{ term} + \left(\frac{70}{2} + 1 \right)^{\text{th}} \text{ term} \right]$$

$$= \frac{1}{2} [35^{\text{th}} \text{ term} + 36^{\text{th}} \text{ term}]$$

$$= \frac{1}{2} [50 + 50]$$

$$= 50$$

(Here all the observations from 21 to 38 all are equal to 50)

Q10. Calculate the mean and median for the following distribution:

| | | | | | | | |
|-----------|---|----|----|----|----|----|----|
| Number | 5 | 10 | 15 | 20 | 25 | 30 | 35 |
| Frequency | 1 | 2 | 5 | 6 | 3 | 2 | 1 |

Sol. writing the distribution in C.F. table

| Number (x) | Frequency (f) | c.f. | fx |
|---------------|------------------|------|-----|
| 5 | 1 | 1 | 5 |
| 10 | 2 | 3 | 20 |
| 15 | 5 | 8 | 75 |
| 20 | 6 | 14 | 120 |
| 25 | 3 | 17 | 75 |
| 30 | 2 | 19 | 60 |
| 35 | 1 | 20 | 35 |
| Total | 20 | | 390 |

$$(i) \text{ Mean} = \frac{\sum fx}{\sum f} = \frac{390}{20} = 19.5$$

(ii) Here $n=20$ which is even

$$\begin{aligned} \text{Median} &= \frac{1}{2} \left[\frac{n}{2}^{\text{th}} \text{ term} + \left(\frac{n}{2} + 1 \right)^{\text{th}} \text{ term} \right] \\ &= \frac{1}{2} \left[\frac{20}{2}^{\text{th}} \text{ term} + \left(\frac{20}{2} + 1 \right)^{\text{th}} \text{ term} \right] \\ &= \frac{1}{2} [10^{\text{th}} \text{ term} + 11^{\text{th}} \text{ term}] \\ &= \frac{1}{2} (20+20) = 20 \end{aligned}$$

Q11. The daily wages (in rupees) of 19 workers are:
 41, 21, 38, 27, 31, 45, 23, 26, 29, 30, 28, 25, 35, 42, 47,
 53, 29, 31, 35.

Find (i) the median (ii) lower quartile (iii) upper quartile
 (iv) inter quartile range.

Sol. (i) Median = $\frac{n+1}{2}$ th term = $\frac{19+1}{2} = 10^{\text{th}}$ term = 31
 (ii) lower quartile (Q_1) = $\frac{n+1}{4} = \frac{19+1}{4} = 5^{\text{th}}$ term = 27
 (iii) upper quartile (Q_3) = $3\left(\frac{n+1}{4}\right) = 3\left(\frac{19+1}{4}\right) = 15^{\text{th}}$ term = 41
 (iv) inter quartile range = $Q_3 - Q_1 = 41 - 27 = 14$

Q12. From the following frequency distribution, find:
 (i) The median (ii) lower quartile (iii) upper quartile
 (iv) inter quartile range.

| | | | | | | | |
|-----------|----|----|----|----|----|----|----|
| Variate | 15 | 18 | 20 | 22 | 25 | 27 | 30 |
| Frequency | 4 | 6 | 8 | 9 | 7 | 8 | 6 |

Sol. writing frequency in distribution in c.f. table:

| Variates | Frequency (f) | c.f. |
|----------|---------------|------|
| 15 | 4 | 4 |
| 18 | 6 | 10 |
| 20 | 8 | 18 |
| 22 | 9 | 27 |
| 25 | 7 | 34 |
| 27 | 8 | 42 |
| 30 | 6 | 48 |

Here $n = 48$ which is even

$$\begin{aligned}\text{(i) Median} &= \frac{1}{2} \left[\frac{48}{2}^{\text{th}} \text{ term} + \left(\frac{48}{2} + 1 \right)^{\text{th}} \text{ term} \right] \\ &= \frac{1}{2} [24^{\text{th}} \text{ term} + 25^{\text{th}} \text{ term}] = \frac{1}{2} [22 + 22] \\ &= 22\end{aligned}$$

observations for 19 to 27 are all equal to 22.

$$\text{(ii) Lower quartile } (Q_1) = \frac{n}{4}^{\text{th}} \text{ term} = \frac{48}{4} = 12^{\text{th}} \text{ term} = 20$$

$$\text{(iii) Upper quartile } (Q_3) = \frac{3n}{4}^{\text{th}} \text{ term} = \frac{3 \times 48}{4} = 36^{\text{th}} \text{ term} = 27$$

$$\text{(iv) Inter quartile range} = Q_3 - Q_1 = 27 - 20 = 7$$

- Q13. For the following frequency distribution, find: (i) the median
(ii) lower quartile (iii) upper quartile.

| | | | | | | | | |
|-----------|----|----|----|----|----|----|----|----|
| Variate | 25 | 31 | 34 | 40 | 45 | 48 | 50 | 60 |
| Frequency | 3 | 8 | 10 | 15 | 10 | 9 | 6 | 2 |

- sd. writing the distribution in CF table:

| Variates | Frequency (f) | c.f. |
|----------|---------------|------|
| 25 | 3 | 3 |
| 31 | 8 | 11 |
| 34 | 10 | 21 |
| 40 | 15 | 36 |
| 45 | 10 | 46 |
| 48 | 9 | 55 |
| 50 | 6 | 61 |
| 60 | 2 | 63 |

Here $n=63$ which is odd

$$(i) \text{ median} = \frac{63+1}{2}^{\text{th}} \text{ term} = 32^{\text{th}} \text{ term} = 40$$

$$(ii) \text{ lower quartile } (Q_1) = \frac{n+1}{4} = \frac{63+1}{4} = 16^{\text{th}} \text{ term} = 34$$

$$(iii) \text{ upper quartile } (Q_3) = \frac{3(n+1)}{4} = \frac{3(63+1)}{4} = 48^{\text{th}} \text{ term} = 48$$

Q14. Use graph paper for this question.

The table given below shows the monthly wages of some factory workers.

(i) Using the table, calculate the cumulative frequencies of workers.

(ii) Draw the cumulative frequency curve.

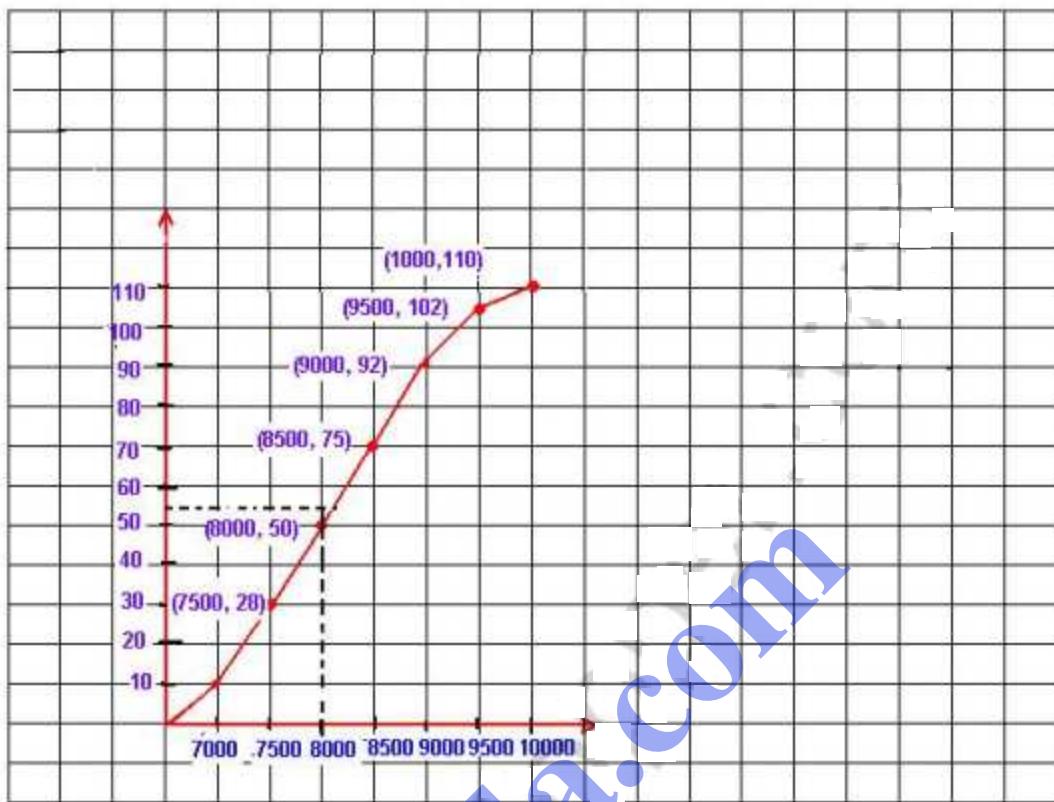

Use $1\text{cm} = \text{Rs. } 500$, starting the origin at $\text{Rs. } 6500$ on x -axis, and $1\text{cm} = 10$ workers on y -axis

(iii) Use your graph to write down the median wage in Rs.

| Wages in Rs. | 6500-7000 | 7000-7500 | 7500-8000 | 8000-8500 | 8500-9000 | 9000-9500 | 9500-10000 |
|--------------|-----------|-----------|-----------|-----------|-----------|-----------|------------|
| frequency | 10 | 18 | 22 | 25 | 17 | 10 | 8 |

Sol: writing the distribution in cumulative frequency table.

| Wages (in Rs.) | Frequency | (c.f.) |
|----------------|-----------|--------|
| 6500-7000 | 10 | 10 |
| 7000-7500 | 18 | 28 |
| 7500-8000 | 22 | 50 |
| 8000-8500 | 25 | 75 |
| 8500-9000 | 17 | 92 |
| 9000-9500 | 10 | 102 |
| 9500-10000 | 8 | 110 |

Now taking points $(1000, 10)$, $(7500, 28)$, $(8000, 50)$,
 $(8500, 75)$, $(9000, 92)$, $(9500, 102)$, $(10000, 110)$ on
the graph and join them in free hand to form an
ogive (CF Curve) as shown.

$\therefore n=110$ which is even

$$\begin{aligned}\text{Median} &= \frac{1}{2} \left[\frac{n}{2}^{\text{th}} \text{ term} + \left(\frac{n}{2} + 1 \right)^{\text{th}} \text{ term} \right] \\ &= \frac{1}{2} [55^{\text{th}} \text{ term} + 56^{\text{th}} \text{ term}] \\ &= 55.5^{\text{th}} \text{ observations.}\end{aligned}$$

Take a point A(55.5) on y-axis and through draw a
line parallel to x-axis which meets the curve
at P, draw a line on x-axis which meets x-axis
at Q, which represents Rs. 8100

\therefore Hence median = 8100.

Q15. The following table shows the distribution of the heights of a group of factory workers:

| Height (cm) | 150-155 | 155-160 | 160-165 | 165-170 | 170-175 | 175-180 | 180-185 |
|----------------|---------|---------|---------|---------|---------|---------|---------|
| No. of workers | 6 | 12 | 18 | 20 | 13 | 8 | 6 |

(i) Determine the cumulative frequencies.

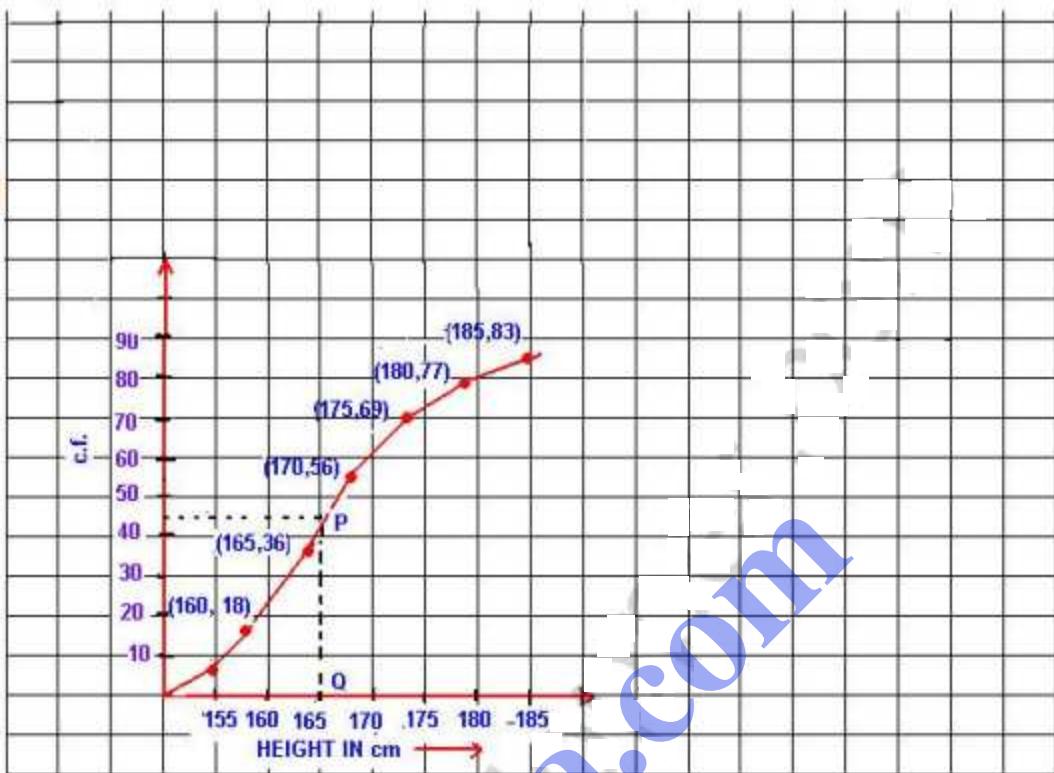

(ii) Draw the C.F curve on a graph paper.

Use $2\text{cm} = 5\text{cm}$ height on one axis, and $2\text{cm} = 10$ workers on the other.

(iii) From your graph, write down the median height in cm.

Sol. Representing the distribution in CF distribution:

| Height (cm) | No. of workers (f) | c.f. |
|-------------|-----------------------|------|
| 150-155 | 6 | 6 |
| 155-160 | 12 | 18 |
| 160-165 | 18 | 36 |
| 165-170 | 20 | 56 |
| 170-175 | 13 | 69 |
| 175-180 | 8 | 77 |
| 180-185 | 6 | 83 |

Here $n=83$ which is even

Now taking points $(155, 6)$, $(160, 18)$, $(165, 36)$, $(170, 56)$,
 $(175, 69)$, $(180, 77)$, $(185, 83)$ on the graph.

NOW join them with free hand to form the ogive or CF curve as shown.

Here $n=83$ which is odd

$$\text{Median} = \frac{n+1}{2}^{\text{th}} \text{ observation} = \frac{83+1}{2} = 42^{\text{nd}} \text{ observation.}$$

Take a point A(42) on y -axis and from A, draw a horizontal line parallel to x -axis meeting the curve at P. from P draw a line \perp to x -axis which meets it at Q.

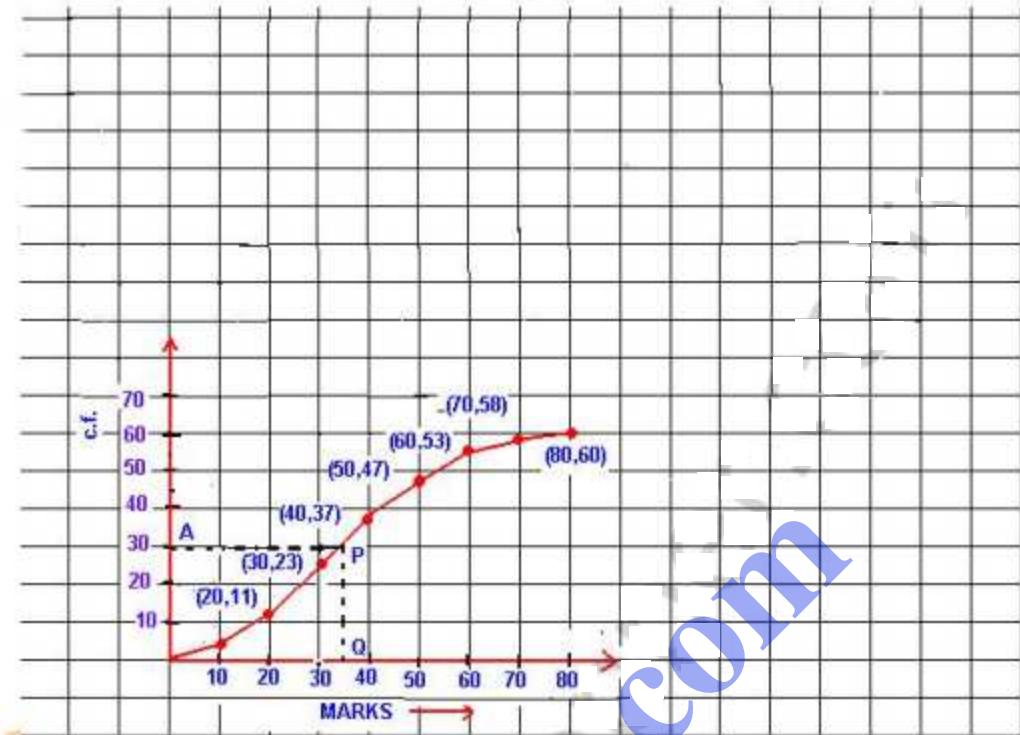

$\therefore Q$ is the median which is 166.5 cm..

Q16. Using the data given below construct the cumulative frequency table and draw the ogive. From the ogive, determine the median.

| Marks | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 | 50-60 | 60-70 | 70-80 |
|-----------------|------|-------|-------|-------|-------|-------|-------|-------|
| No. of students | 3 | 8 | 12 | 14 | 10 | 6 | 5 | 2 |

Sol. Representing the distribution in cumulative frequency distribution.

| Marks | No. of students (f) | c.f. |
|-------|---------------------|------|
| 0-10 | 3 | 3 |
| 10-20 | 8 | 11 |
| 20-30 | 12 | 23 |
| 30-40 | 14 | 37 |
| 40-50 | 10 | 47 |
| 50-60 | 6 | 53 |
| 60-70 | 5 | 58 |
| 70-80 | 2 | 60 |

Taking points $(10, 3)$, $(20, 11)$, $(30, 23)$, $(40, 37)$, $(50, 47)$, $(60, 53)$, $(70, 58)$, $(80, 60)$ on the graph. Now join them in free hand to form an ogive as shown.

Here $n=60$ which is even

$$\begin{aligned}\text{Median} &= \frac{1}{2} \left[\frac{60}{2}^{\text{th}} \text{ term} + \left(\frac{60}{2} + 1 \right)^{\text{th}} \text{ term} \right] \\ &= \frac{1}{2} (30^{\text{th}} \text{ term} + 31^{\text{th}} \text{ term}) \\ &= 30.5^{\text{th}} \text{ observation.}\end{aligned}$$

NOW take a point A(30.5) on y-axis and from A, draw a line parallel to x-axis meeting the curve at P and from P, draw a \perp to x-axis meeting it at Q.

$\therefore Q$ is the median which is 35.

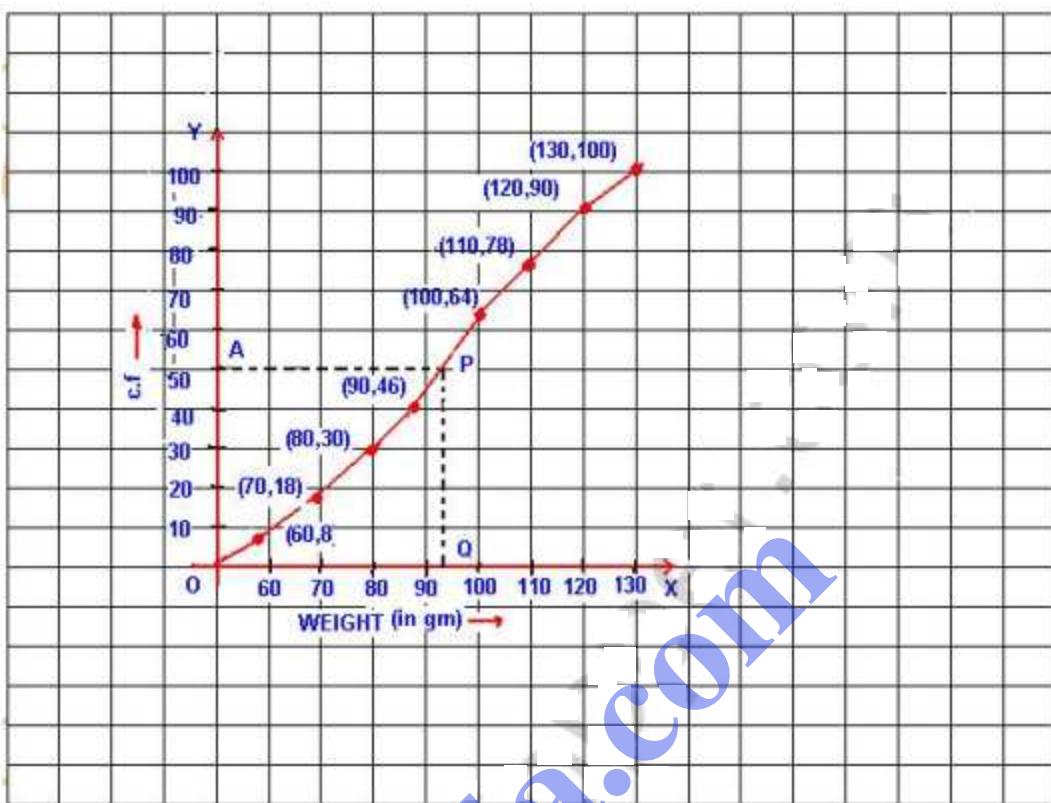

Q17. Use graph paper for this question.

The following table shows the weights in gm of a sample of 100 potatoes taken from a large consignment:

| Weight (gm) | 50-60 | 60-70 | 70-80 | 80-90 | 90-100 | 100-110 | 110-120 | 120-130 |
|-------------|-------|-------|-------|-------|--------|---------|---------|---------|
| Frequency | 8 | 10 | 12 | 16 | 18 | 14 | 12 | 10 |

- (i) calculate the cumulative frequencies.
- (ii) draw a CF curve and from it determine the median weight of potatoes.

| Weight (gm) | Frequency | c.f. |
|-------------|-----------|------|
| 50-60 | 8 | 8 |
| 60-70 | 10 | 18 |
| 70-80 | 12 | 30 |
| 80-90 | 16 | 46 |
| 90-100 | 18 | 64 |
| 100-110 | 14 | 78 |
| 110-120 | 12 | 90 |
| 120-130 | 10 | 100 |

Now plot the points $(60, 8)$, $(70, 18)$, $(80, 30)$, $(90, 46)$, $(100, 64)$, $(110, 78)$, $(120, 90)$, $(130, 100)$ on the graph and join them in freehand to form an ogive as shown.

Here $n=100$ which is even

$$\text{Median} = \frac{1}{2} \left[\frac{100}{2}^{\text{th}} \text{ term} + \left(\frac{100}{2} + 1 \right)^{\text{th}} \text{ term} \right]$$

$$= \frac{1}{2} (50 + 51) = 50.5$$

Now take a point A(50.5) on the y-axis and from A draw a line parallel to x-axis meeting the curve at P. from P, draw a \perp bar on x-axis meeting it at Q.

Q is the median which is 93.gm.

Q18. Attempt this question on graph paper.

| Age (yrs) | 5-15 | 15-25 | 25-35 | 35-45 | 45-55 | 55-65 | 65-75 |
|---------------------------------------|------|-------|-------|-------|-------|-------|-------|
| No. of casualties due to accidents | 6 | 10 | 15 | 13 | 24 | 8 | 7 |

- (i) Construct the 'less than' CF curve for the above data, using $2\text{cm} = 10 \text{ years}$, on one axis and $2\text{cm} = 10 \text{ Casualties}$ on the other.
- (ii) From your graph determine
(a) The median (b) The upper quartile.

| Age | No. of Casualties | Cumulative Frequency |
|--------------|-------------------|----------------------|
| Less than 15 | 6 | 6 |
| Less than 25 | 10 | 16 |
| Less than 35 | 15 | 31 |
| Less than 45 | 13 | 44 |
| Less than 55 | 24 | 68 |
| Less than 65 | 8 | 76 |
| Less than 75 | 7 | 83 |

Now plot the points $(15, 6)$, $(25, 16)$, $(35, 31)$, $(45, 44)$, $(55, 68)$, $(65, 76)$ and $(75, 83)$ on the graph and join these points in free hand to form a cf curve (ogive) as shown.

Here $n = 83$, which is odd.

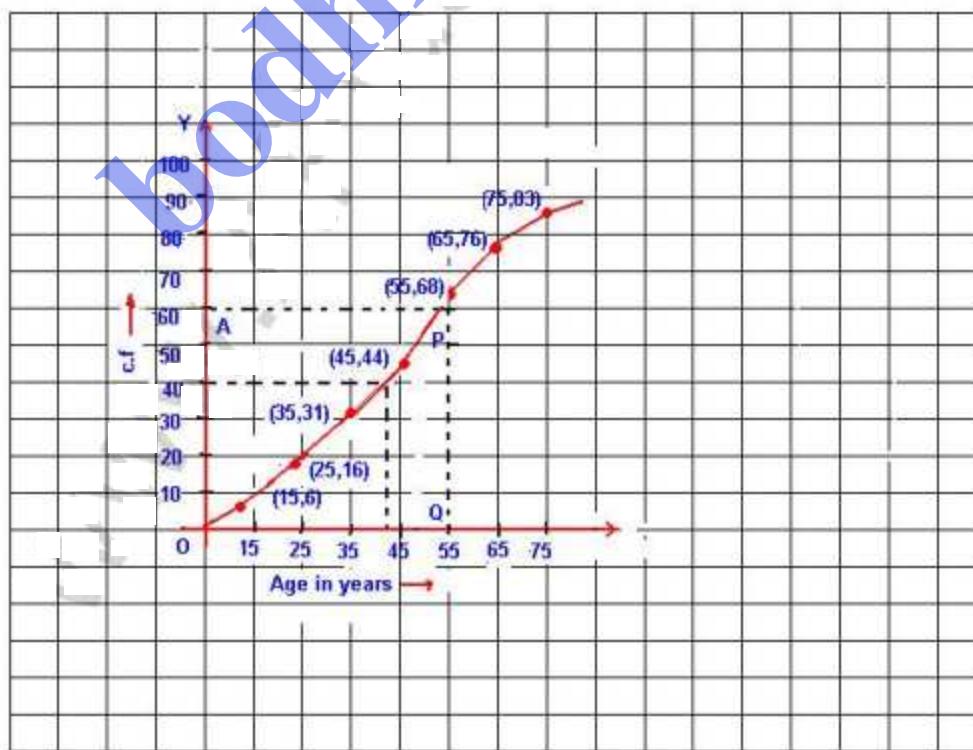

$$(i) \text{Median} = \frac{n+1}{2} = \frac{83+1}{2} = \frac{84}{2} = 42.$$

Now we take point A(42) on y-axis and from A, draw a line parallel to x-axis meeting the curve at P and from P, draw a line to x-axis meeting it at Q.

Q is the median which is 43.

$$(ii) \text{Upper quartile} = \frac{3(n+1)}{4} = \frac{3(83+1)}{4} = \frac{252}{4} = 63$$

Take a point B(63) on y-axis and from B, draw a line to x-axis meeting the curve at L. from L, draw a line to x-axis meeting it at M which is 52. upper quartile = 52 years.

Q19. The daily wages of 160 workers in a building project are given below:

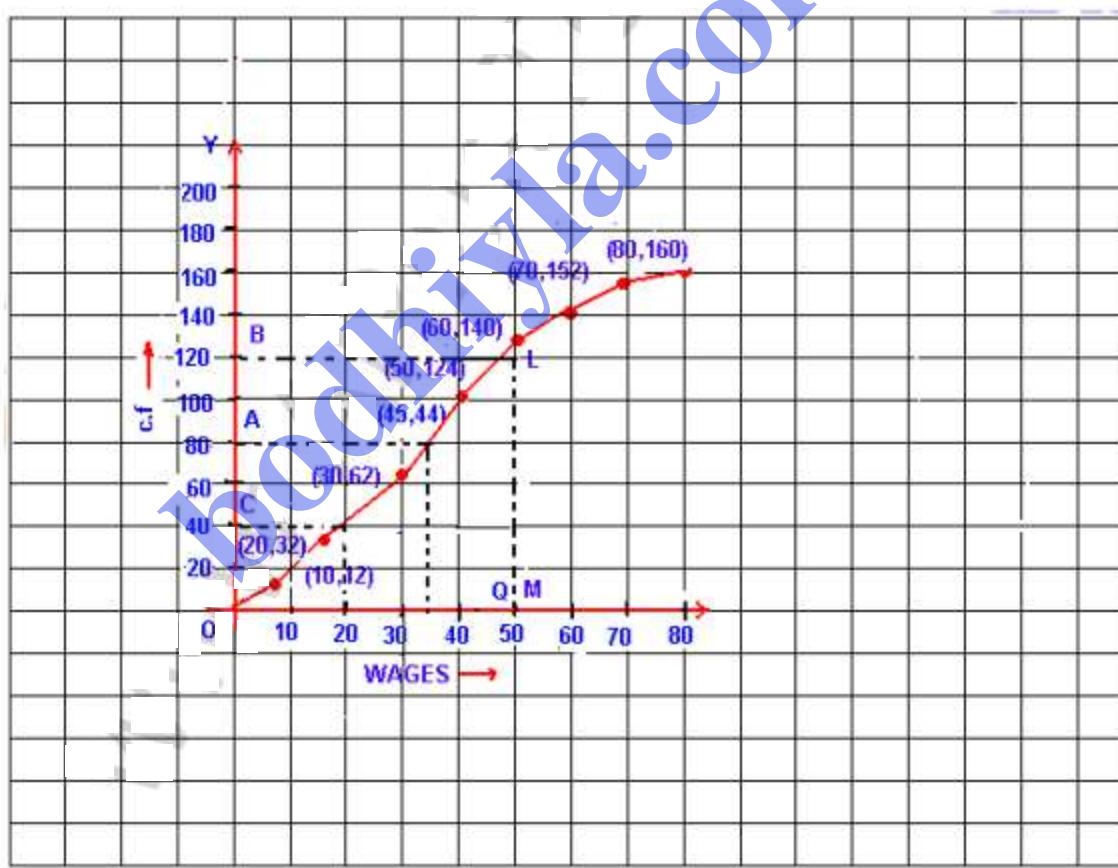

| Weight (kg) | 40-45 | 45-50 | 50-55 | 55-60 | 60-65 | 65-70 | 70-75 | 75-80 |
|-------------|-------|-------|-------|-------|-------|-------|-------|-------|
| Frequency | 5 | 17 | 22 | 45 | 51 | 31 | 20 | 9 |

Using a graph paper, draw an ogive for the above distribution. Use your ogive to estimate:

- The median wage of the workers.
- The upper quartile wage of the workers.
- The lower quartile wage of the workers.
- the percentage of workers who earn more than Rs. 45 a day.

| Wages in Rs. per day | Number of workers | Cumulative Frequency |
|----------------------|-------------------|----------------------|
| 0-10 | 12 | 12 |
| 10-20 | 20 | 32 |
| 20-30 | 30 | 62 |
| 30-40 | 38 | 100 |
| 40-50 | 24 | 124 |
| 50-60 | 16 | 140 |
| 60-70 | 12 | 152 |
| 70-80 | 8 | 160 |

Sol.

Now plot the points $(10, 12)$, $(20, 32)$, $(30, 62)$, $(40, 100)$, $(50, 124)$, $(60, 140)$, $(70, 152)$, $(80, 160)$ on the graph and join them in free hand to form an ogive as shown.

Here $n=160$ which is even

$$\text{(ii) Median} = \frac{1}{2} \left[\frac{n}{2} + \left(\frac{n}{2} + 1 \right) \right] = \frac{1}{2} \left[\frac{160}{2} + \left(\frac{160}{2} + 1 \right) \right] \\ = \frac{1}{2} \{ 80 + 81 \} = 80.5$$

Now take a point A(80, 5) on y -axis and from A, draw a \parallel^{el} line to x -axis meeting the curve at P and from P, draw a \perp^{ar} to x -axis meeting it at Q

Median = Rs. 34.3 or Rs. 34.30.

$$\text{(ii) (a) upper quartile} = \frac{3n}{4} = \frac{3 \times 160}{4} = 120$$

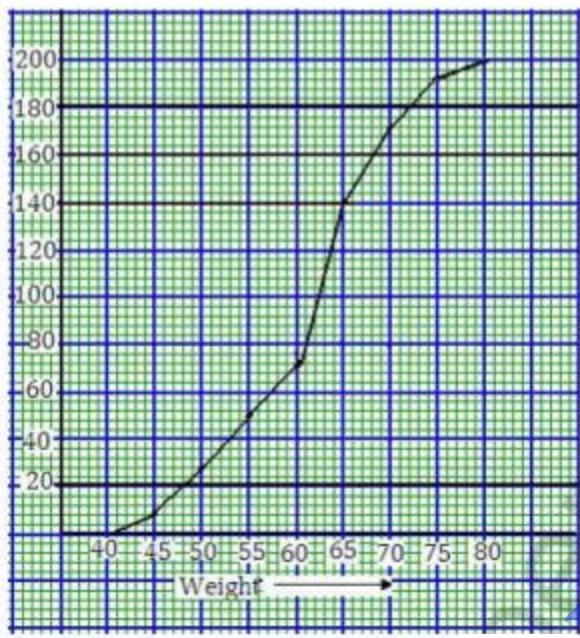

Take point B(120) on y -axis and from B, draw a line \parallel^{el} to x -axis meeting the curve at L and from L, draw a line \perp^{ar} to x -axis meeting it at M and M is the upper quartile.

Upper quartile M = 47 or Rs. 47

$$\text{(b) lower quartile} = \frac{n}{4} = \frac{160}{4} = 40$$

Take a point C(40) on y -axis and from C, draw a line \parallel^{el} to x -axis meeting the curve at R and from R, draw a line \perp^{ar} to x -axis meeting it at S.

S is the lower quartile which is Rs. 25.

$$(i) \text{ percentage} = \frac{156}{200} \times 100 = 78\% \text{ (approx)}$$

$$(ii) \% = \frac{30}{100} \times 200 = 60$$

\therefore The weight = 65 kg.

(iii) Under weight = 45

$$\text{Over weight} = 200 - 45 = 155.$$

Ques. Marks Scored by 400 students in an examination
are as follows:

| Marks | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 | 50-60 | 60-70 | 70-80 | 80-90 | 90-100 |
|-----------------|------|-------|-------|-------|-------|-------|-------|-------|-------|--------|
| No. of students | 10 | 20 | 22 | 40 | 55 | 75 | 80 | 58 | 28 | 12 |

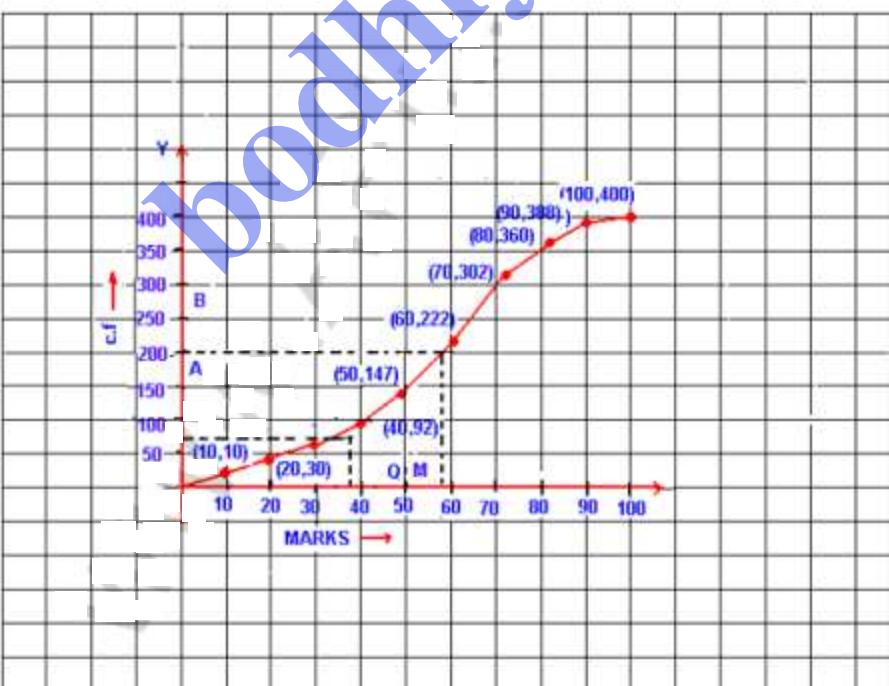

Draw the ogive and from it determine:

(i) The median mark, and (ii) The pass marks if 80% of the students pass examination.

Sol.

Representing the given data in the C.F table as given below:

| Marks | Number of students | Cumulative Frequency |
|--------|--------------------|----------------------|
| 0-10 | 10 | 10 |
| 10-20 | 20 | 30 |
| 20-30 | 22 | 52 |
| 30-40 | 40 | 92 |
| 40-50 | 55 | 147 |
| 50-60 | 75 | 222 |
| 60-70 | 80 | 302 |
| 70-80 | 58 | 360 |
| 80-90 | 28 | 388 |
| 90-100 | 12 | 400 |

Q22. The marks obtained by 120 students in a mathematics test are given below:

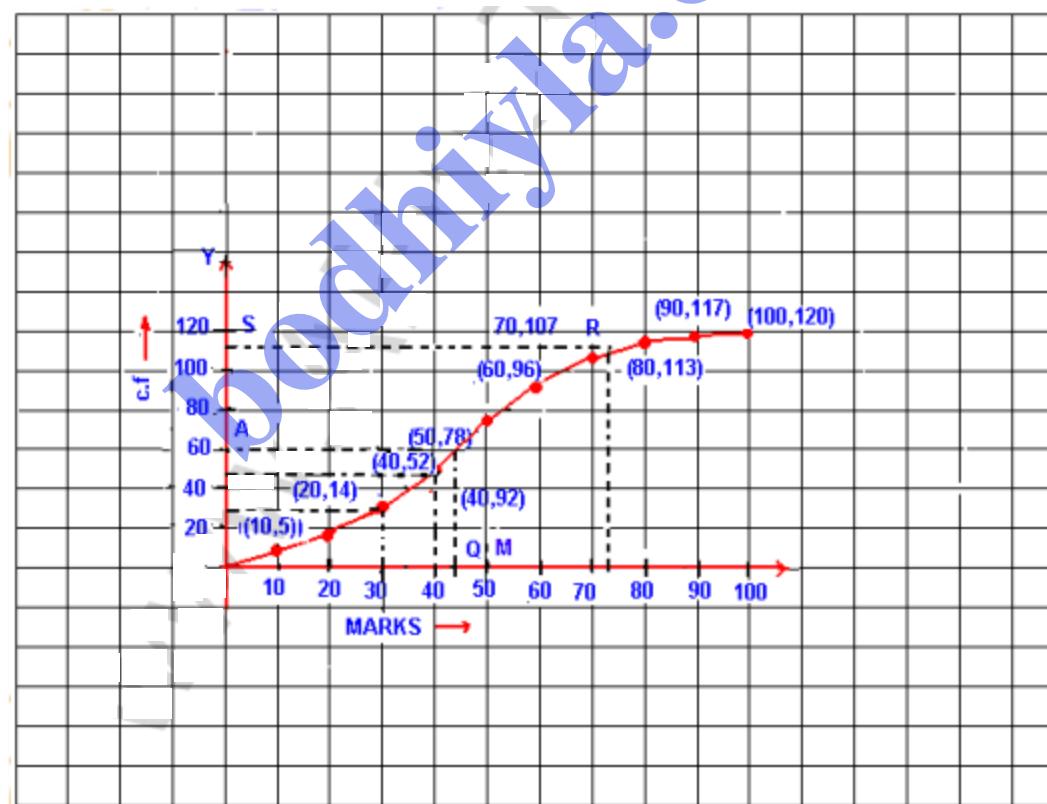

| Marks | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 | 50-60 | 60-70 | 70-80 | 80-90 | 90-100 |
|-----------------|------|-------|-------|-------|-------|-------|-------|-------|-------|--------|
| No. of students | 5 | 9 | 16 | 22 | 26 | 18 | 11 | 6 | 4 | 3 |

Draw an ogive for the given distribution on a graph sheet. Use a suitable scale for your ogive. Use your ogive to estimate:

- (i) The median
- (ii) The lower median
- (iii) The no. of students who obtained more than 75% marks in the test.
- (iv) The no. of students who did not pass in the test if the pass percentage was 40%.

sol. Representing the given data in CF table as given below:

| Marks | Number of student | Cumulative Frequency |
|--------|-------------------|----------------------|
| 0-10 | 5 | 5 |
| 10-20 | 9 | 14 |
| 20-30 | 16 | 30 |
| 30-40 | 22 | 52 |
| 40-50 | 26 | 78 |
| 50-60 | 18 | 96 |
| 60-70 | 11 | 107 |
| 70-80 | 6 | 113 |
| 80-90 | 4 | 117 |
| 90-100 | 3 | 120 |

Now we plot the points $(10, 5)$, $(20, 14)$, $(30, 30)$, $(40, 52)$, $(50, 78)$, $(60, 96)$, $(70, 101)$, $(80, 113)$, $(90, 117)$ and $(100, 120)$ on the graph and join the points in freehand to form an ogive as shown.

Here $n = 120$ which is an even number

$$(i) \text{Median} = \frac{1}{2} \left[\frac{120}{2} + \left(\frac{120}{2} + 1 \right) \right] = \frac{1}{2}(60 + 61) \approx 60.5$$

Now take a point A(60.5) on y-axis and from A draw a parallel to x-axis meeting the curve in P and from P, draw a \perp^{er} to x-axis meeting it at Q.

$\therefore Q$ is the median which is 43.00 (approx).

$$(ii) \text{Lower quartile} = \frac{n}{4} = \frac{120}{4} = 30$$

Now take a point B(30) on y-axis and from B, draw a line \parallel^{el} to x-axis meeting the curve in L and from L draw a \perp^{er} to x-axis meeting it at M.

$\therefore M$ is the lower quartile which is 30.

(iii) Take a point C(75) on x-axis and from C draw a line \perp^{er} to it meeting the curve at R. From R, draw a line \parallel^{el} to x-axis meeting y-axis at S.

$\therefore S$ shows 110 students getting below 75% and $120 - 110 = 10$ students getting more than 75% marks.

(iv) pass percentage is 40%.

Now take a point D(40) on x-axis and from D draw a \perp^{er} to x-axis meeting the curve at E and from E, draw a line \parallel^{el} to x-axis meeting the y-axis at F.

$\therefore F$ shows 52.

\therefore No. of students who could not get 40% and failed in the examination are 52.

Q23. Draw an ogive for the following frequency distribution. Use your ogive to estimate: (i) The median (ii), the no. of students who obtained more than 75% marks. (use square paper to solve this question)

| Marks | 0-9 | 10-19 | 20-29 | 30-39 | 40-49 | 50-59 | 60-69 | 70-79 | 80-89 | 90-99 |
|-----------------|-----|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| No. of students | 5 | 9 | 16 | 22 | 26 | 18 | 11 | 6 | 4 | 3 |

Sol. Representing the given data in cf table as given below:

| Marks | Number of students | Cumulative Frequency |
|-----------|--------------------|----------------------|
| 0.5-9.5 | 5 | 5 |
| 9.5-19.5 | 9 | 14 |
| 19.5-29.5 | 16 | 30 |
| 29.5-39.5 | 22 | 52 |
| 39.5-49.5 | 26 | 78 |
| 49.5-59.5 | 18 | 96 |
| 59.5-69.5 | 11 | 107 |
| 69.5-79.5 | 6 | 113 |
| 79.5-89.5 | 4 | 117 |
| 89.5-99.5 | 3 | 120 |

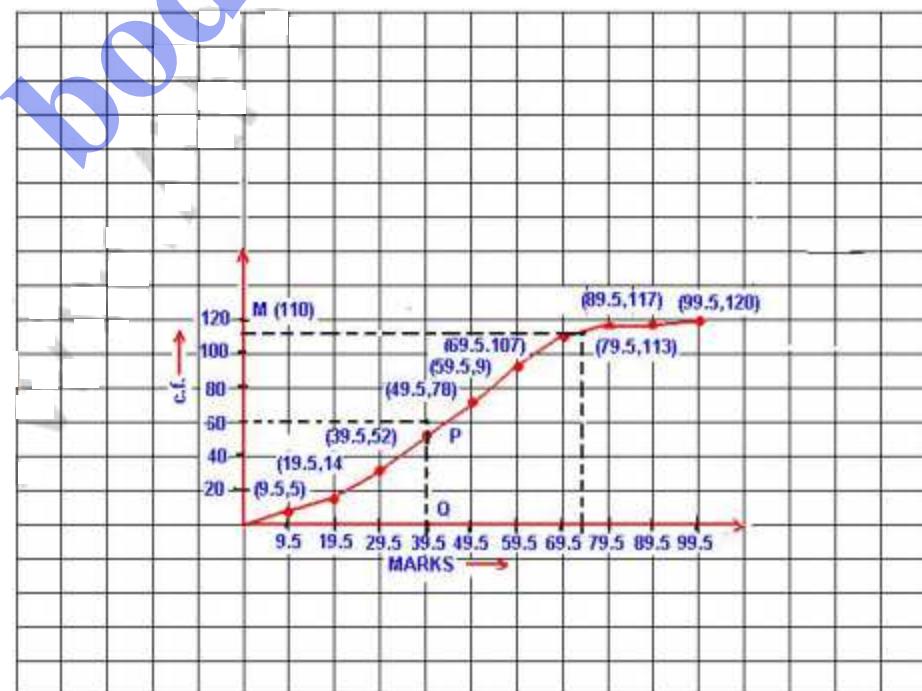

Now plot the points $(9.5, 5)$, $(19.5, 14)$, $(29.5, 30)$,
 $(39.5, 52)$, $(49.5, 78)$, $(59.5, 96)$, $(69.5, 107)$,
 $(79.5, 113)$, $(89.5, 117)$, $(99.5, 120)$ on the graph and
join them in freehand to form an ogive as shown.
Here $n = 120$ which is even.

$$\text{(i) Median} = \frac{1}{2} \left[\frac{n}{2} + \left(\frac{n}{2} + 1 \right) \right] = \frac{1}{2} \left[\frac{120}{2} + \left(\frac{120}{2} + 1 \right) \right]$$

$$= \frac{1}{2} [60 + 61] = \frac{121}{2} = 60.5$$

Now take a point A(60.5) on Y-axis and from A,
draw a line \parallel to x-axis meeting the curve at P
and from P, draw a \perp to x-axis meeting it in Q.
 $\therefore Q$ is the median which is 45.

(ii) No. of students who get more than 75% marks: now
get a point B(75) on x-axis and from B draw a
line \perp to x-axis meeting the curve L and from L,
draw a line \parallel to x-axis meeting the y-axis as M
 $\therefore M$ shows $(120 - 110) = 10$ students getting more than
75% marks.

Q24. 100 pupils in a school have heights as tabulated below:

| Height (in cm) | 121-130 | 131-140 | 141-150 | 151-160 | 161-170 | 171-180 |
|----------------|---------|---------|---------|---------|---------|---------|
| No. of pupils | 12 | 16 | 30 | 20 | 14 | 8 |

Draw the ogive for the above data and from it determine the median (use graph paper)

Sol.

Representing the given data in cumulative frequency table (in continuous distribution):

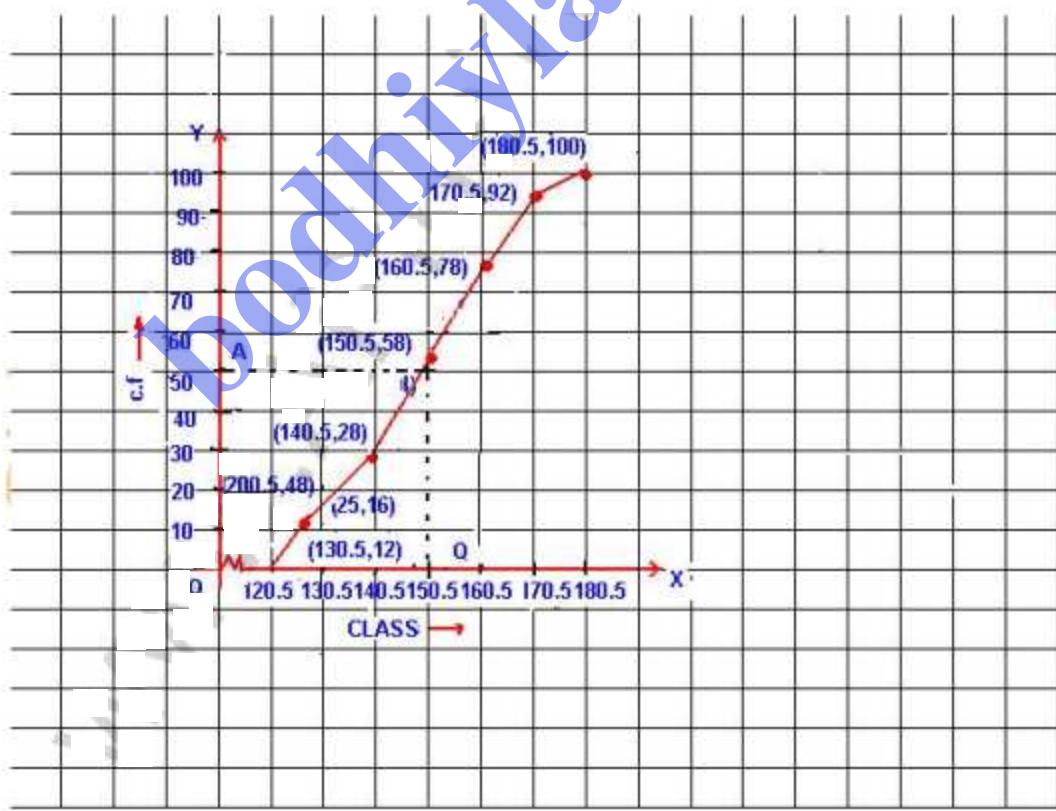

| Height in cm | No. of pupils | c.f. |
|--------------|---------------|------|
| 120.5- 130.5 | 12 | 12 |
| 130.5-140.5 | 16 | 28 |
| 140.5-150.5 | 30 | 58 |
| 150.5-160.5 | 20 | 78 |
| 160.5-170.5 | 14 | 92 |
| 170.5-180.5 | 8 | 100 |

Here $n=100$ which is an even number.

$$\text{Median} = \frac{1}{2} \left[\frac{n}{2} + \left(\frac{n}{2} + 1 \right) \right] = \frac{1}{2} \left[\frac{100}{2} + \left(\frac{100}{2} + 1 \right) \right]$$
$$= \frac{1}{2} (50 + 51) = \frac{101}{2} = 50.5$$

Now plot the points $(130.5, 12)$, $(140.5, 28)$, $(150.5, 58)$, $(160.5, 78)$, $(170.5, 92)$ and $(180.5, 100)$ on the graph and join them in free hand to form an ogive as shown.

Now take point $A(50.5)$ on y -axis and from A draw a line \parallel to x -axis meeting the curve at P and from P , draw a line \perp to x -axis meeting it at Q .
 $\therefore Q(147.5)$ is the median.

EXERCISE - 23.3

Q1. Find the mode of the following sets of

$$(i) 3, 2, 0, 1, 2, 3, 5, 3$$

$$(ii) 5, 7, 6, 8, 9, 0, 6, 8, 1, 8$$

$$(iii) 9, 0, 2, 8, 5, 3, 5, 4, 1, 5, 2, 7$$

Sol.

- (i) The number 3 occurs maximum times, i.e. mode = 3
- (ii) The number 8 occurs maximum times, i.e. mode = 8
- (iii) The number 5 occurs maximum times, i.e. mode = 5

Q2. Calculate the mean, the median and the mode of the numbers: 3, 2, 6, 3, 3, 1, 1, 2.

Sol.

Arranging in ascending order 1, 1, 2, 2, 3, 3, 3, 6

$$(i) \text{Mean} = \frac{\sum x}{n} = \frac{1+1+2+2+3+3+3+6}{8} = \frac{21}{8} = 2.625$$

(ii) Here $n=8$ which is even

$$\begin{aligned} \text{Median} &= \frac{1}{2} \left[\frac{n}{2} + \left(\frac{n}{2} + 1 \right) \right] = \frac{1}{2} \left[\frac{8}{2} + \left(\frac{8}{2} + 1 \right) \right] \\ &= \frac{1}{2} (4^{\text{th}} + 5^{\text{th}}) = \frac{1}{2} (2+3) = 2.5 \end{aligned}$$

(iii) Here 3 occurs maximum times

$$\therefore \text{Mode} = 3$$

Q3. Calculate the mean, the median and the mode of the following numbers: 3, 1, 5, 6, 3, 4, 5, 3, 7, 2.

Sol.

Arranging in ascending order 1, 2, 3, 3, 3, 3, 4, 5, 5, 6, 7

$$(i) \text{Mean} = \frac{\sum x_i}{n} = \frac{1+2+3+3+3+4+5+5+6+7}{10} = \frac{39}{10} = 3.9$$

(ii) Here $n=10$ which is even

$$\begin{aligned} \text{Median} &= \frac{1}{2} \left[\frac{10}{2}^{\text{th}} \text{ term} + \left(\frac{10}{2} + 1 \right)^{\text{th}} \text{ term} \right] = \frac{1}{2} \left[5^{\text{th}} + 6^{\text{th}} \text{ terms} \right] \\ &= \frac{1}{2} (3+4) = \frac{7}{2} = 3.5 \end{aligned}$$

(iii) Here 3 occurs maximum times. Mode = 3.

Q4. A boy scored the following marks in various class tests during a term, each test being marked out of 20:

15, 17, 16, 7, 10, 12, 14, 16, 19, 12, 16

(i) what are his modal marks?

(ii) what are his median marks?

(iii) what are his mean marks?

Sol. Arranging in ascending order 7, 10, 12, 12, 14, 15, 16, 16, 17, 19

(i) Modal marks is 16 as it occurs in maximum times.

(ii) Here $n=11$ which is odd

$$\text{Median} = \left(\frac{n+1}{2}\right)^{\text{th}} \text{ term} = \frac{11+1}{2} = 6^{\text{th}} \text{ term.}$$

$$\therefore \text{Median} = 15$$

$$\begin{aligned} \text{(iii) Mean} &= \frac{\sum x_i}{n} = \frac{7+10+12+12+14+15+16+16+16+17+19}{11} \\ &= \frac{154}{11} = 14 \end{aligned}$$

Q5. Find the mean, median and mode of the following marks obtained by 16 students in a class test marked out of 10 marks : 0, 0, 2, 2, 3, 3, 3, 4, 5, 5, 5, 5, 6, 6, 7, 8

Sol. Here $n=16$

$$\begin{aligned} \text{(i) Mean} &= \frac{\sum x_i}{n} = \frac{0+0+2+2+3+3+3+4+5+5+5+5+6+6+7+8}{16} \\ &= \frac{64}{16} = 4 \end{aligned}$$

$$\begin{aligned} \text{(ii) Median} &= \frac{1}{2} \left[\frac{16}{2} + \left(\frac{16}{2} + 1 \right) \right] = \frac{1}{2} (8^{\text{th}} + 9^{\text{th}} \text{ terms}) \\ &= \frac{1}{2} (4+5) = 4.5 \end{aligned}$$

(iii) Here 5 occurs in maximum times
 $\therefore \text{mode} = 5$

Q6. Find the mode for the following distribution:

| | | | | | |
|----|----|----|----|----|----|
| 15 | 17 | 20 | 21 | 25 | 28 |
| 6 | 7 | 23 | 18 | 6 | 4 |

Sol. Here 20 occurs in maximum times i.e. 23 times
Mode = 20.

Q7. Calculate the mean, the median and the mode of the following distribution:

| | | | | | | |
|----------------|---|---|---|---|---|---|
| No. of goals | 0 | 1 | 2 | 3 | 4 | 5 |
| No. of matches | 2 | 4 | 7 | 6 | 8 | 3 |

Sol. Writing the given distribution in cf distribution:

| No. of goals (x) | No. of matches(f) | c.f. | fx |
|------------------|-------------------|------|----|
| 0 | 2 | 2 | 0 |
| 1 | 4 | 6 | 4 |
| 2 | 7 | 13 | 14 |
| 3 | 6 | 19 | 18 |
| 4 | 8 | 27 | 32 |
| 5 | 3 | 30 | 15 |
| Total | 30 | | 83 |

$$(i) \text{ Mean} = \frac{\sum fx}{\sum f} = \frac{83}{30} = 2.77$$

(ii) Here $n=30$ which is an even number

$$\begin{aligned} \text{Median} &= \frac{1}{2} \left[\frac{n}{2} + \left(\frac{n}{2} + 1 \right) \right] = \frac{1}{2} \left\{ \frac{30}{2} + \left(\frac{30}{2} + 1 \right) \right\} \\ &= \frac{1}{2} (15^{\text{th}} + 16^{\text{th}} \text{ terms}) = \frac{1}{2}(3+3) = 3 \end{aligned}$$

(iii) frequency of 4 is maximum i.e., 8

$$\therefore \text{Mode} = 4.$$

- Q8. At a shooting competition, the scores of a competitor were as given below:

| | | | | | | |
|-----------------|---|---|---|---|---|---|
| Score | 0 | 1 | 2 | 3 | 4 | 5 |
| Number of shots | 0 | 3 | 6 | 4 | 7 | 5 |

(i) what was his modal score?

(ii) what was his median score?

(iii) what was his total score?

(iv) what was his mean score?

Sol. writing the distribution in cf table:

| Score (x) | No. of shots (f) | c.f. | f.x. |
|--------------|---------------------|------|------|
| 0 | 0 | 0 | 0 |
| 1 | 3 | 3 | 3 |
| 2 | 6 | 9 | 12 |
| 3 | 4 | 13 | 12 |
| 4 | 7 | 20 | 28 |
| 5 | 5 | 25 | 25 |
| Total | 25 | | 80 |

(ii) Model score is 4 as it occurs in maximum times
ie, 7, Mode = 4

(iii) Here $n=25$ which is an odd number.

$$\text{Median} = \frac{25+1}{2} = 13^{\text{th}} \text{ term}$$

Hence median = 3

(iv) total score = 80

$$(\text{iv}) \text{ Mean} = \frac{\sum f x}{\sum f} = \frac{80}{25} = 3.2$$

Q9. The following table gives the weekly wages (in Rs) of workers in a factory:

| Weekly wages (In Rs) | 50-55 | 55-60 | 60-65 | 65-70 | 70-75 | 75-80 | 80-85 | 85-90 |
|-------------------------|-------|-------|-------|-------|-------|-------|-------|-------|
| No. of workers | 5 | 20 | 10 | 10 | 9 | 6 | 12 | 8 |

Calculate :

(i) The mean

(ii) the modal class

(iii) The no. of workers getting weekly wages below Rs. 80.

(iv) The no. of workers getting Rs. 65 or more but less than Rs. 85 as weekly wages.

| Weekly wages | No. of workers (f) | Class marks (x) | c.f. | f.x. |
|--------------|-----------------------|--------------------|------|--------|
| 50-55 | 5 | 52.5 | 5 | 262.5 |
| 55-60 | 20 | 57.5 | 25 | 1150.0 |
| 60-65 | 10 | 62.5 | 35 | 625.0 |
| 65-70 | 10 | 67.5 | 45 | 675.0 |
| 70-75 | 9 | 72.5 | 54 | 652.0 |
| 75-80 | 6 | 77.5 | 60 | 465.0 |
| 80-85 | 12 | 82.5 | 72 | 990.0 |
| 85-90 | 8 | 87.5 | 80 | 700.0 |
| Total | 80 | | | 5520. |

(ii) Mean = $\frac{\sum f_x}{\sum f} = \frac{5520}{80} = 69$

(iii) Modal class :

frequency of class 55-60 is maximum i.e. 20

class 55-60 is the modal class.

(iv) No. of workers getting weekly wages below Rs. 80 = 60

(v) No. of workers getting above Rs. 65 and below Rs. 85 as weekly wages = 70 - 35 = 37.

Q10. Calculate the mean of the distribution given below:

| Marks | 0-9 | 10-19 | 20-29 | 30-39 | 40-49 | 50-59 |
|-----------|-----|-------|-------|-------|-------|-------|
| Frequency | 4 | 6 | 12 | 6 | 7 | 5 |

Also state (i) The median class (ii) The modal class.

Sol. Representing the given distribution in cf table:

| Class (before adjustment) | Class (after adjustment) | Frequency (f) | C.f. (x) | Class Mark | fx |
|------------------------------|-----------------------------|------------------|-------------|------------|--------|
| 0-9 | 0.5-9.5 | 4 | 4 | 4.5 | 18.0 |
| 10-19 | 9.5-19.5 | 6 | 10 | 14.5 | 87.0 |
| 20-29 | 19.5-29.5 | 12 | 22 | 24.5 | 294.0 |
| 30-39 | 29.5-39.5 | 6 | 28 | 34.5 | 207.0 |
| 40-49 | 39.5-49.5 | 7 | 35 | 44.5 | 311.5 |
| 50-59 | 49.5-59.5 | 5 | 40 | 54.5 | 272.5 |
| Total | | 40 | | | 1190.0 |

$$(i) \text{ Mean} = \frac{\sum fx}{\sum f} = \frac{1190}{40} = 29.75$$

(ii) Here $n=40$, which is even

$$\begin{aligned}\text{Median} &= \frac{1}{2} \left[\frac{40}{2}^{\text{th}} + \left(\frac{40}{2} + 1 \right)^{\text{th}} \text{ term} \right] \\ &= \frac{1}{2} (20^{\text{th}} + 21^{\text{th}} \text{ terms})\end{aligned}$$

∴ Median classes are 20-29

(iv) Frequency of the classes 20-29 is greatest

∴ Modal class is 20-29.

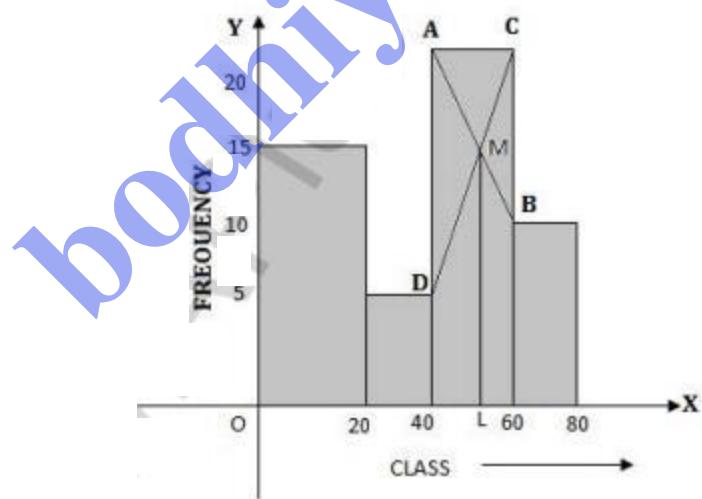

Q11.

Find the mode of the following distribution by drawing a histogram:

| | | | | |
|-----------|------|-------|-------|-------|
| Classes | 0-20 | 20-40 | 40-60 | 60-80 |
| Frequency | 15 | 6 | 18 | 10 |

Sol.

| Class | Frequency |
|-------|-----------|
| 0-20 | 15 |
| 20-40 | 6 |
| 40-60 | 18 |
| 60-80 | 10 |

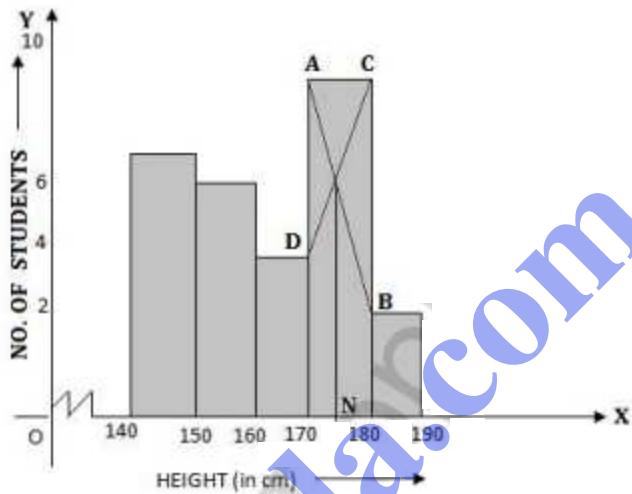

Present the classes on x-axis and frequency on y-axis, we draw a histogram as shown. From the point AB and CD intersecting each other at M. and from ML \perp to x-axis
 \therefore L is the median which is 52.

Q12. Find the modal height of the following distribution by drawing a histogram:

| Height (in cm) | 140-150 | 150-160 | 160-170 | 170-180 | 180-190 |
|-----------------|---------|---------|---------|---------|---------|
| No. of students | 7 | 6 | 4 | 10 | 2 |

Sol.

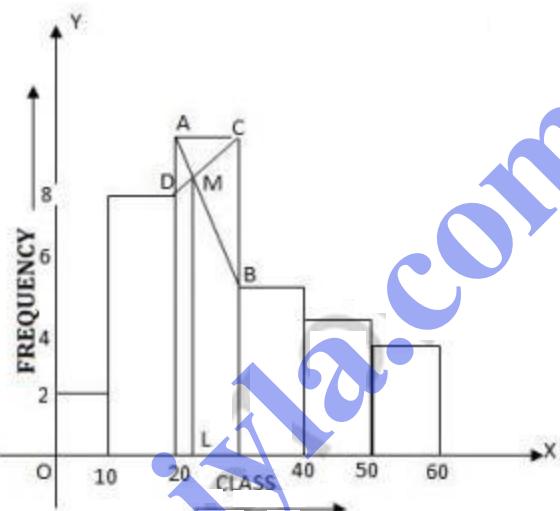

| Height (in cm) | No. of students |
|----------------|-----------------|
| 140-150 | 7 |
| 150-160 | 6 |
| 160-170 | 4 |
| 170-180 | 10 |
| 180-190 | 2 |

Now present the height on x-axis and no. of students (frequency) on y-axis and draw a histogram as shown. In the histogram join AB and CD intersecting at M. from M, draw MN to x-axis. N shows the mode. \therefore Hence mode = 174 cm.

Q13. Draw a histogram and estimate the mode for the following frequency distribution:

| Classes | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 | 50-60 |
|-----------|------|-------|-------|-------|-------|-------|
| Frequency | 2 | 8 | 10 | 5 | 4 | 3 |

sol.

| Classes | Frequency |
|---------|-----------|
| 0-10 | 2 |
| 10-20 | 8 |
| 20-30 | 10 |
| 30-40 | 5 |
| 40-50 | 4 |
| 50-60 | 3 |

Representing the classes on x-axis and frequency on y-axis, we draw a histogram as shown. In the histogram join AB and CD intersecting at M. from M, draw ML ^{perp} to x-axis. L shows the mode.

∴ Hence mode = 23.

Q14. IQ of 50 students was recorded as follows:

| IQ score | 80-90 | 90-100 | 100-110 | 110-120 | 120-130 | 130-140 |
|-----------------|-------|--------|---------|---------|---------|---------|
| No. of students | 6 | 9 | 16 | 13 | 4 | 2 |

Draw a histogram for the above data and estimate the mode.

Sol.

| IQ Score No. of | students |
|--------------------|----------|
| 80-90 | 6 |
| 90-100 | 9 |
| 100-110 | 16 |
| 110-120 | 13 |
| 120-130 | 4 |
| 130-140 | 2 |

Representing the IQ score on x-axis and no. of students on y-axis, we draw a histogram as shown. Join AB and CD intersecting each other at M. From M draw ML \perp to x-axis.

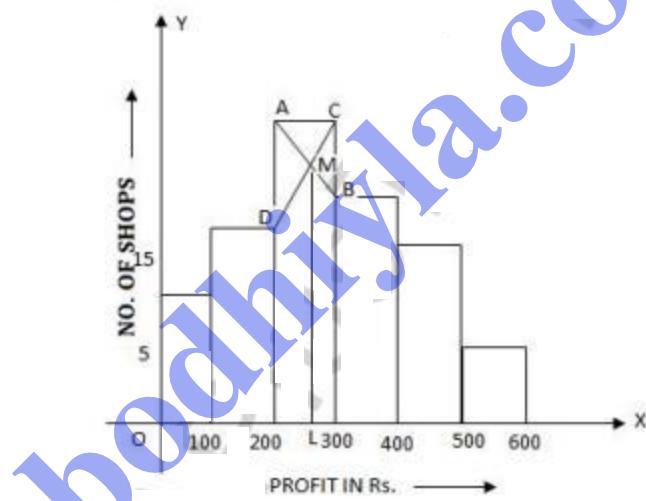

L is the mode which is 107.

Q15. The daily profits in Rs. of 100 shops in a market are distributed as follows:

| Profit per shop (in Rs) | 0-100 | 100-200 | 200-300 | 300-400 | 400-500 | 500-600 |
|----------------------------|-------|---------|---------|---------|---------|---------|
| No. of shops | 12 | 18 | 27 | 20 | 17 | 6 |

Draw a histogram of the data given above, on graph paper and estimate the mode.

Sol.

| Profit per shop (in Rs.) | No. of shops |
|--------------------------|--------------|
| 0-100 | 12 |
| 100-200 | 18 |
| 200-300 | 27 |
| 300-400 | 20 |
| 400-500 | 17 |
| 500-600 | 6 |

Representing profit per shop on x-axis and no. of shops on y-axis, we draw a histogram as shown. join AB and CD intersecting each other at M. from M draw ML \perp to x-axis. L is the mode which is Rs. 260.

- Q16. Draw a histogram for the following distribution:

| Wt.(in kg) | 40-44 | 45-49 | 50-54 | 55-59 | 60-64 | 65-69 |
|-----------------|-------|-------|-------|-------|-------|-------|
| No. of students | 2 | 8 | 12 | 10 | 6 | 4 |

Hence estimate the modal weight.

Sol. We write the given distribution in continuous form:

| Wt. In kg. | No. of students |
|------------|-----------------|
| 39.5- 44.5 | 2 |
| 44.5- 49.5 | 8 |
| 49.5- 54.5 | 12 |
| 54.5- 59.5 | 10 |
| 59.5- 64.5 | 6 |
| 64.5- 69.5 | 4 |

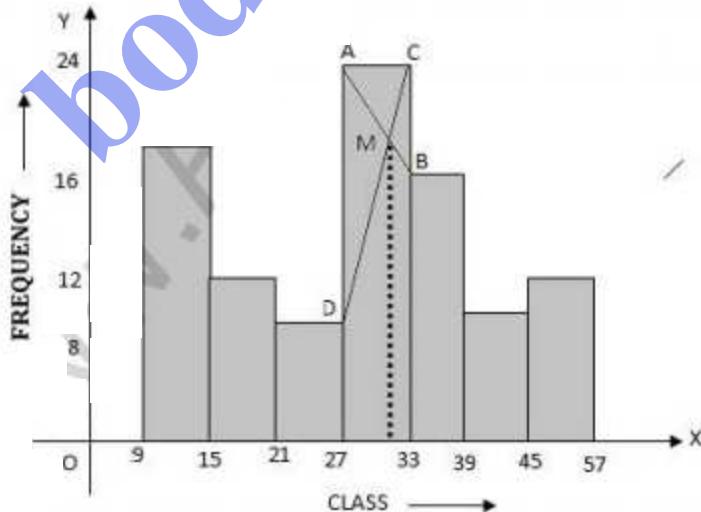

Representing the weight (in kg) on x-axis and no. of students on y-axis, we draw a histogram as shown. Now join AB and CD intersecting each other at M. from M, draw $ML \perp$ to x-axis. L is the mode which is 31.5 kg.

- Q7. Find the mode of the following distribution by drawing a histogram.

| | | | | | | | |
|-----------|----|----|----|----|----|----|----|
| Mid value | 12 | 18 | 24 | 30 | 36 | 42 | 48 |
| Frequency | 20 | 12 | 8 | 24 | 16 | 8 | 12 |

Also state the Modal class.

Sol.

| Mid value | Class | Frequency |
|-----------|-------|-----------|
| 12 | 9-15 | 20 |
| 18 | 15-21 | 12 |
| 24 | 21-27 | 8 |
| 30 | 27-33 | 24 |
| 36 | 33-39 | 16 |
| 42 | 39-45 | 8 |
| 48 | 45-51 | 12 |

Representing class on x-axis and frequency on y-axis we draw a histogram as shown. join AB and CD intersecting each other at M. from M, draw ML \perp to x-axis. L shows the mode which is 30.5 and class is 27-33.
